CHARACTERISTICS OF DEGREE PROGRAMME

General and specific learning objectives

The master's degree program in Political and Government Sciences (GOV) aims to provide an in-depth knowledge of the rules and dynamics underneath the functioning of legal and political institutions by developing the critical tools necessary to analyse and evaluate legislative and governmental actions.

The educational plan offered is interdisciplinary.

Alongside the analysis of political institutions from a national and global perspective, the course will give an opportunity to deepen knowledge of specific geographic areas – of particular interest and relevance – and to examine the issue of fundamental rights.

A particular focus is reserved to the new forms of fundamental human rights that are consequence of the progress of biotechnology (bio-ethics and bio-law issues), in geographical projections other than the Euro-Atlantic ones.

Expected learning outcomes

By the end of the studies, students of Political and Government Sciences (GOV) will be able to:

- Understand the functioning of political and government institutions and master their dynamics both from a formal-legal perspective and from the point of view of the decision-making processes that animate political behaviour.
- Understand the interactions between different levels of public decision (local, national, supranational) and the different profiles of legality. Understand the articulations of the territorial representation – through the electoral tool – and of the functional one – through policy pressure mechanisms – in order to be able to operate competently in these areas, both from the point of view of public-institutional relations (Public Affairs) and of the intervention in the legislative process.

Professional profile and employment opportunities

The aim is to introduce into the labour market graduates with advanced knowledge in the political, legal and economic fields, with a focus on the dynamics of complex societies in a globalized context and on the historical evolution of the forms of political and interests representations.

Professional opportunities:

1. In the private sector: private and tertiary sector companies, associations, trade unions, press and publishing;
2. In the public sector: public administrations at local, regional, national and supranational level, including those accessed through an open competition; companies with public service management duties; consulting companies; representative political and governmental institutions.

In addition, graduates in Political and Government Sciences (GOV) will be also able to continue their education with Masters or Research Doctorates (PhD) both in Italy and abroad.

EXPERIENCE OF STUDY ABROAD AS PART OF THE TRAINING PROGRAM

The University of Milan supports international mobility by providing its students with the opportunity to spend study and internship periods abroad. It is a unique chance to enrich your educational path in a new exciting environment.

The agreements entered into by the University with over 300 universities from 30 different countries under the European Erasmus+ programme allow regularly enrolled students to carry out part of their studies at one of the partner universities or to undertake internships at companies, training and research centres and other organizations.

Similar international mobility opportunities are provided outside Europe, through agreements with a number of prestigious institutions.

Study and internships abroad

There are about twenty Erasmus exchange agreements available for the Master program in “Political Science and Government”(the full list can be found at <https://www.unimi.it/en/node/13034/>) but new agreements are being signed within the Department of International, legal and historical-political Studies, many of which will also apply to our Master program. The geographical areas where are located the partner universities are the Mediterranean Europe (France, Spain, Portugal), the Central and Eastern Europe (Hungary, Poland, Czech Republic, Slovakia) but also the German area (Germany) and Turkey. The subjects that can be studied abroad are mainly legal and political, followed by the historical ones. It must be therefore considered that the means of recognition of the subjects are quite elastic, given the lack of a perfect coincidence between the courses of study in Europe. In this regard there is the chance to use the credits for elective activities and also those available for the preparation of the doctoral thesis (up to 21 credits). The ability to conduct research abroad for the purpose of writing the thesis is particularly encouraged, especially for a master degree. However, it is recommended to choose the appropriate area of research before departure, to be agreed with a teacher of the Master programs and possibly identifying a reference professor at the foreign University. The methods of recognition of study abroad require a preliminary learning agreement with the Erasmus delegate for the Department and the possible adjustment once in place. The recognition of credits obtained at the partner University in Italy is closely linked to these forms and the consent of the Erasmus delegate.

How to participate in Erasmus mobility programs

How to participate in Erasmus+ mobility programmes

The students of the University of Milan can participate in mobility programmes, which last 3 to 12 months, through a public selection procedure.

Ad hoc commissions will evaluate:

- the candidate's proposed study programme abroad
- his/her foreign language proficiency
- the reasons behind his/her application

Call for applications and informative meetings

The public selection generally begins around February each year with the publication of a call for applications specifying the destinations, with the respective programme duration, requirements and online application deadline.

Every year, before the deadline for the call, the University organizes informative meetings to illustrate opportunities and rules for participation to students.

Erasmus+ scholarship

The European Union grants the winners of the Erasmus+ programme selection a scholarship to contribute to their mobility costs, which is supplemented by the University funding for disadvantaged students.

Language courses

Students who pass the selections for mobility programmes can benefit from intensive foreign language courses offered each year by the University.
