

UNIVERSITA' DEGLI STUDI DI MILANO PROGRAMME DESCRIPTION - ACADEMIC YEAR 2025/26 MASTER DEGREE

CHEMISTRY (Classe LM-54 R) Enrolled in the academic year 2025-2026

HEADING	
Degree classification - Denomination	LM-54 R
and code:	
Degree title:	Dottore Magistrale
Curricula currently available:	ANALYTICAL AND PHYSICAL CHEMISTRY SCIENCES AND
	TECHNOLOGIES / MOLECULES AND MATERIALS : DESIGN, SYNTHESIS
	AND APPLICATIONS
Length of course:	2 years
Credits required for admission:	180
Total number of credits required to	120
complete programme:	
Years of course currently available:	1st
Access procedures:	Open, subject to entry requirements
Course code:	FBC

CHARACTERISTICS OF DEGREE PROGRAMME

General and specific learning objectives

The primary objective of the Master?s Degree program in Chemical Sciences is to train specialized graduates in chemical sciences who can competently apply chemical procedures and protocols, develop and characterize new products and materials, experiment with new technologies, conduct chemical analyses, and perform quality controls requiring full mastery of chemical and instrumental techniques. Additionally, graduates will be capable of processing acquired data, preparing reports on analysis results, and conducting laboratory tests to develop new products.

Within this framework, the Master?s Degree program aligns with European standards for the teaching of Chemical Sciences, aiming to provide specific competencies, particularly in chemical disciplines and their applications. Graduates will be able to provide expert opinions in pure and applied chemistry and perform all activities defined by current legislation related to the profession of chemist.

Another specific objective of the program is to enable students to immediately enter professional practice or pursue further advanced studies (Ph.D. or Master's programs). Consequently, the program aims to provide students with comprehensive mastery of scientific methods and content in the chemical field, facilitating a smooth transition into the workforce or further academic pursuits.

In detail, graduates of this program will have:

Specialized and in-depth knowledge of various branches of chemistry, including theoretical and experimental aspects; Complete mastery of the scientific method of inquiry;

Full autonomy in the workplace, enabling them to hold high-responsibility roles in project development and organizational structures;

Expertise in techniques for understanding phenomena at the molecular level and specialized skills in specific areas of chemistry and biochemistry;

The ability to apply innovative methods and techniques and operate complex equipment;

Advanced knowledge of modern synthesis methodologies for chemical compounds, such as pharmaceuticals, bio-organic and bio-inorganic molecules, new materials, homogeneous and heterogeneous catalysts;

Proficiency in the spectroscopic and structural characterization of chemical compounds, including materials used in cultural heritage;

A solid foundation for applying theoretical methods of simulation and computational modeling to chemical systems;

A strong understanding of mathematical and computational tools for support;

The ability to use at least one European Union language fluently, in both written and spoken forms, in addition to Italian;

The adaptability to keep pace with the continuous evolution of chemical disciplines and interact with closely related professional fields.

Graduates may register (after passing the relevant state examination) with the National Order of Chemists and Physicists as CHEMISTS (Section B ? Chemistry), to perform activities recognized under current regulations.

EuroMaster® Certification

The Master?s Degree in Chemical Sciences at the University of Milan was one of the first in Italy to receive the EuroMaster Label in September 2010. This accreditation is awarded by a dedicated commission appointed by the European Thematic Network Association (https://ectn.eu/), which brings together European universities and chemical societies.

Expected learning outcomes

The graduate with a Master?s degree in Chemical Sciences possesses the knowledge and comprehension skills necessary to perform highly qualified professional activities in corporate management and research laboratories within the chemical and pharmaceutical-chemical fields. In addition to an in-depth understanding of chemical science and technology and managerial tasks, they also demonstrate the rigor required to apply knowledge and understanding through precise use of the scientific method.

They are capable of organizing research activities, defining development themes and related programs, ensuring the integrated coordination of various research sectors, maintaining scientific updates, verifying results, and promoting their development and application. Furthermore, they have the ability to adapt to the continuous evolution of chemical disciplines and interact with related professional fields.

Regarding independent judgment, the graduate in Chemical Sciences is skilled in interpreting experimental data and possesses the tools to frame specific chemical knowledge within its relationships to other scientific and technical disciplines. They can design and carry out experiments, plan schedules and methodologies, and independently evaluate the final outcomes. They are also proficient in managing projects, structures, and personnel, identifying new perspectives and innovative development strategies, and evaluating, interpreting, and re-elaborating literature data with professional integrity.

In terms of communication skills, the graduate in Chemical Sciences is able to thoroughly communicate the results of their research and assessments to audiences, including those not specialized in chemical sciences. Additionally, they are capable of coordinating group activities and interacting with international colleagues using the English language.

Regarding learning abilities, the graduate possesses the capacity to continually update their scientific and professional education through critical consultation of bibliographic sources and databases. They are adept at working towards objectives independently and in teams, positively addressing encountered problems, and are inclined to develop and continuously enhance their knowledge. This includes expertise in chemical fields (specialized texts, scientific journals, and multimedia educational tools, even in foreign languages) as well as in related and complementary areas (including legal and/or economic aspects) essential for managing complex projects.

Professional profile and employment opportunities

CHEMIST

Role in a work context:

This graduate conducts research, experiments, and qualitative and quantitative analyses on natural or synthetic substances and their mixtures, identifies their composition and chemical and energetic variations, determines and applies investigation methods, and formulates theories and laws based on observations. They improve the synthesis of known substances and synthesize new ones. Additionally, they investigate the chemical properties of known materials, planning and producing new ones.

The graduate with a Master's Degree in Chemical Sciences can practice as a chemist autonomously or as a freelancer by

registering in "Section A" of the Professional Register of the Order of Chemists and Physicists. They can carry out activities promoting and developing scientific and technological innovation, as well as managing and designing technologies, and undertake roles of high responsibility in industries, environmental sectors, healthcare, cultural heritage, and public administration.

Skills associated with the role:

The graduate in Chemical Sciences possesses in-depth knowledge in chemical sciences, including the synthesis and characterization of new products and materials, health, nutrition, cosmetics, energy, sustainable development, and green chemistry for environmental protection and the energy transition. They can manage the synthesis and characterization of complex compounds using innovative procedures and advanced instrumentation. They can assess the best methodologies to solve analytical problems and determine complex molecular structures by applying chromatographic techniques, thermal analysis, electrochemistry, electrophoresis, and advanced spectroscopic methods (NMR, MS, etc.). They can interpret and rationalize scientific data comprehensively.

Career opportunities:

Graduates with a Master's Degree in Chemical Sciences can find employment in research institutions, public administrations, national or international consulting firms and professional practices, companies, industries, research laboratories, and quality control and certification laboratories requiring high qualifications in chemistry or related sciences. Additionally, they can pursue further studies in PhD programs or specialized scientific schools.

QUALITY ASSURANCE MANAGER

Role in a work context:

The Quality Assurance Manager is a crucial professional figure in the chemical and pharmaceutical industries, as good manufacturing practices and laboratory practices require holders of production authorizations for chemical products and processes, including medicines, to maintain a quality assurance system. This role coordinates the services and departments involved in manufacturing to ensure an efficient, controlled, and documented quality control system. They must ensure periodic and proper inspections to evaluate the system's effectiveness and applicability.

Skills associated with the role:

This professional collaborates with and coordinates the infrastructures and services involved in production. Necessary skills for this role include analytical and synthesis capabilities, resource management and coordination, teamwork skills, and the ability to navigate various business areas.

Career opportunities:

This role is found in companies, chemical and pharmaceutical industries, analysis laboratories, and environments requiring high qualifications in quality management.

CHEMICAL AND PHARMACEUTICAL LABORATORY MANAGER/DIRECTOR

Role in a work context:

This professional defines development themes and research programs aligned with business strategies. They provide integrated support across research and production sectors, allocate technical resources to projects, propose research investments, and formulate budgets. They design and synthesize new products and manage certifications, storage, and transportation. Key responsibilities include research planning, conducting necessary tests and experiments, selecting methods, tools, and timelines, and addressing issues related to project implementation.

Skills associated with the role:

This graduate has advanced professional, technical-scientific, and specialized skills in the chemical and pharmaceutical fields. They can execute research projects within predefined times and costs, interpret and evaluate experimental results, and have planning and management capabilities. They also demonstrate financial resource management and team leadership skills.

Career opportunities:

This role is available in research institutions, industries, research laboratories, analysis facilities, and work environments requiring high qualifications in chemistry or related sciences.

SCIENTIFIC INFORMANT AND COMMUNICATOR

Role in a work context:

This graduate enhances scientific knowledge, applying and transferring it to industries, medicine, pharmacology, and other production sectors. They inform industrial operators about the characteristics and properties of their company's products, propose adopting specific products, and develop scientific information activities within interested companies to ensure proper use. The role of a Scientific Informant is regulated by State laws.

Skills associated with the role:

Required skills include scientific knowledge and commercial abilities. Specifically, they must have: strong foundational knowledge in chemistry, familiarity with pharmaceutical, cosmetic, and food products and their proper use. Additional skills

include proficiency in technical English, computer literacy, communication skills, and proactivity.

Career opportunities:

Scientific informants work in cosmetic, pharmaceutical, food, plastic, dye, detergent, adhesive, or environmental companies, or generally in chemical industries or for specialized publications.

Initial knowledge required

Requirements and Knowledge for Admission

Graduates holding a degree in the L-27 class of Chemical Sciences and Technologies are eligible for admission to the Master's Degree Program in Chemical Sciences. Graduates from other degree classes, as well as those holding a qualification obtained abroad that is recognized as suitable, may also apply, provided they meet the following curricular requirements:

- -> At least 20 ECTS credits in mathematics (from MAT/01 to MAT/09), physics (from FIS/01 to FIS/08), and computer science (INF/01; ING-INF/05);
- ->At least 70 ECTS credits in the scientific-disciplinary sectors of the core areas of the L-27 class table:
- Analytical, environmental, and cultural heritage (CHIM/01 and CHIM/12);
- Inorganic and physical chemistry (CHIM/02 and CHIM/03);
- Organic and biochemical (CHIM/06, BIO/10, BIO/11, and BIO/12);
- Industrial and technological (CHIM/04, CHIM/05, ING-IND/21, ING-IND/22, and ING-IND/25).

Any presence of ECTS credits in scientific-disciplinary sectors not included among those listed will be evaluated by the admission committee of the Degree Program.

In addition to the above curricular requirements, adequate personal preparation is required.

Verification of Knowledge and Personal Preparation

Before undergoing the knowledge assessment for enrollment, students must submit an application for admission via an online procedure, within the period and according to the methods indicated on the website https://scienzechimiche.cdl.unimi.it/it/iscriversi, where updated information on admission and subsequent enrollment procedures can also be found. Admission applications can also be submitted by candidates intending to graduate by December 31, 2025.

Knowledge and personal preparation will be assessed through an interview with a committee on topics related to the core subjects of the Bachelor's Degree in Chemical Sciences. A negative outcome in the interview results in the exclusion of all students, graduates, and undergraduates, from accessing the Master's Degree Program for the current year. The interview will be conducted in June, July, September, and December, and it can also take place before the degree is awarded, provided the above-mentioned curricular requirements are met.

For non-EU students who may face visa and/or residence permit issues, an interview will also be scheduled during late April to May, which may be conducted remotely via a video conferencing platform. These students are strongly advised to take advantage of this opportunity to avoid the risk of failing to obtain all the necessary documentation for enrollment in time.

Students who pass the admission interview can proceed with enrollment approximately five working days after the interview date, within the deadlines indicated on the website https://www.unimi.it/it/studiare/frequentare-un-corso-di-laurea/iscriversi/iscriversi-un-corso-magistrale.

Compulsory attendance

Attendance at laboratory activities is mandatory; in all other cases it is strongly recommended.

Internship criteria

Characteristics of the Internship and Thesis Laboratory

During the second year of the program, students will undertake an experimental internship (15 ECTS), followed by a thesis laboratory (24 ECTS), both of which are preparatory to the drafting of the master's thesis. The thesis consists of a written dissertation on original chemical research conducted by the student under the guidance of a Supervisor and, potentially, a Co-Supervisor, within the research laboratory specified in the admission application. The experimental internship and thesis laboratory have a minimum duration of one calendar year, including attendance of the courses scheduled for the same year.

Theses are categorized as:

Internal Experimental Theses External Experimental Theses

Internal Experimental Theses are those conducted within the Department of Chemistry or departments affiliated with the Faculty of Science and Technology at the University of Milan. Within these theses, students may undertake internships at public or private organizations or companies, under the guidance of an external supervisor, with the approval of their Thesis

Supervisor. The internship can last for a maximum of 20 ECTS, even if split into non-continuous periods. Such internships must be approved by the Teaching Board of the Department of Chemistry.

External Experimental Theses are conducted at other university facilities, either within the University of Milan or at another institution, or at public or private non-profit research centers with suitable infrastructures. Approval for conducting these theses is granted by the Teaching Board of the Department of Chemistry.

In this case, the student must submit an application for admission to the external thesis laboratory, attaching:

A written motivation for the external experimental thesis (one typed page) signed by the student and countersigned by the supervisor (the supervisor must meet the requirements outlined later);

A detailed research plan (one typed page);

A declaration from the host institution confirming their willingness to host the student free of charge and to provide access to their scientific equipment without cost.

Applications must be submitted well in advance to allow for approval by the Teaching Board in the month preceding the start of the thesis. Students are advised to consult the relevant regulations, available on the program website, and contact the Thesis and Internship Committee for guidance.

Students conducting internships at external entities or pursuing external experimental theses are required to report biweekly to their Supervisor and another faculty member appointed by the Thesis and Internship Committee in consultation with the Supervisor, detailing the activities and experiences conducted outside the department.

The Thesis Supervisor is the scientific guarantor for the Teaching Board regarding the assigned research and its proper execution. The Supervisor must be a single individual and may be any Professor or Researcher involved in teaching chemical subjects affiliated with the Department of Chemistry or related departments. The Supervisor can be supported by up to two Co-Supervisors.

Eligible Co-Supervisors include:

Official faculty members from other universities or technical institutions, including international ones;

Graduates recognized as experts in the field;

University of Milan staff with a grade not lower than D, recognized as experts in the field;

CNR researchers operating within the Department of Chemistry;

Experts designated by external thesis-hosting institutions.

Special cases involving individuals of exceptional scientific or technical merit may be considered by the Teaching Board, provided the Supervisor submits written documentation of the individual's specific expertise in the thesis topic.

Internship and Thesis Laboratory Entry

Entry dates for the experimental internship and thesis laboratory ar

Degree programme final exams

To graduate, students must earn 120 ECTS. To qualify for the final examination, students must have passed all courses in their study plan. The final examination consists of a public presentation and discussion of the master's thesis, which may be theoretical and/or experimental and must provide an original contribution to chemical science. The thesis may be written in Italian or English. In either case, an English summary (maximum five typed pages) must be prepared and submitted according to the deadlines indicated on the website:

https://scienzechimiche.cdl.unimi.it/it/studiare/laurearsi.

Graduation Examination Sessions

- July 2026
- October 2026
- December 2026
- February 2027
- April 2027

Notes

In order to obtain their degree, students must be proficient in English at a B2 level under the Common European Framework of Reference for Languages (CEFR). This proficiency level, to be acquired prior to entry into the thesis laboratory, may be certified as follows:

- By submitting a language certificate attesting B2, or higher level in English and issued no more than three years before the date of submission. You will find the list of language certificates recognized by the University at: (https://www.unimi.it/en/node/39322). The certificate must be uploaded during the enrolment procedure, or subsequently to the portal http://studente.unimi.it/uploadCertificazioniLingue;

- By taking a placement test offered by the University Language Centre (SLAM) between October and January of the first year. Students who fail the test will be required to take a SLAM course.

The placement test is mandatory for all those who do not hold a valid certificate attesting to B2 or higher level. Those who have not taken the placement test by the end of January or fail the end-of-course exam six times must obtain the necessary certification privately before graduating.

EXPERIENCE OF STUDY ABROAD AS PART OF THE TRAINING PROGRAM

The University of Milan supports international mobility by providing its students with the opportunity to spend study and internship periods abroad. It is a unique chance to enrich your educational path in a new exciting environment.

The agreements entered into by the University with over 300 universities from the 27 EU member countries under the European Erasmus+ programme allow regularly enrolled students to carry out part of their studies at one of the partner universities or to undertake internships at companies, training and research centres and other organisations.

Similar international mobility opportunities are provided outside Europe, through agreements with a number of prestigious institutions.

The University of Milan is a member of the 4EU+ European University Alliance that brings together eight public multidisciplinary universities: University of Milan, Charles University of Prague, Heidelberg University, Paris-Panthéon-Assas University, Sorbonne University of Paris, University of Copenhagen, University of Geneva, and University of Warsaw. The 4EU+ Alliance offers integrated educational pathways and programmes to promote the international mobility of students (physical, blended and virtual).

Study and internships abroad

As part of the study plan, students can participate in the Erasmus program projects activated for the Degree Course. In particular, within the Erasmus + programme, students can choose between 16 associated European universities. At these locations, students can obtain training credits by following courses and passing the relevant exams, or by carrying out part or all of the experimental internship and the final thesis laboratory. The acquisition of training credits is subject to approval by the Teaching Committee of a specific study plan (Learning Agreement) and the passing of exams at the foreign institution. Interested students are asked to make an appointment in advance with the Tutor for international mobility and Erasmus (prof. Emma Gallo, Tel. 0250314374; e-mail: emma.gallo@unimi.it) for the preparation of the procedures. Students can also participate in numerous seminar meetings with foreign Teachers.

How to participate in Erasmus mobility programs

The students of the University of Milan can participate in mobility programmes, through a public selection procedure. Ad hoc commissions will evaluate:

- Academic career
- the candidate's proposed study programme abroad
- his/her foreign language proficiency
- the reasons behind his/her application

Call for applications and informative meetings

The public selection for Erasmus+ mobility for study generally begins around February each year with the publication of a call for applications specifying destinations and requirements. Regarding the Erasmus+ Mobility for Traineeship, the University of Milan usually publishes two calls a year enabling students to choose a destination defined by an interinstitutional agreement or to find a traineeship position on their own.

The University organises informative meetings to illustrate mobility opportunities and rules for participation.

Erasmus+ scholarship

The European Union grants the winners of the Erasmus+ programme selection a scholarship to contribute to their mobility costs, which may be supplemented by the University funding for disadvantaged students.

Language courses

Students who pass the selections for mobility programmes can benefit from intensive foreign language courses offered each year by the University Language Centre (SLAM).

ACTIVE CURRICULA LIST

ANALYTICAL AND PHYSICAL CHEMISTRY SCIENCES AND TECHNOLOGIES Course years currently available: 1st MOLECULES AND MATERIALS: DESIGN, SYNTHESIS AND APPLICATIONS Course years currently available: 1st

Procedure for choosing a curriculum

The Master's Degree in Chemical Sciences offers two curricula designed to meet the demand for specialization and the desire of individual students to focus on specific disciplinary fields. At the same time, it maintains the overall coherence of the educational path, ensuring that graduates possess the skills needed to address any issue in the field of chemical sciences. Two DOUBLE DEGREE programs with French universities are also available.

Students are required to select their preferred curriculum or Double Degree track from the options offered.

DOUBLE DEGREE PROGRAM DD1

Master's Degree in Chemical Sciences and Master's in Bio-Informatics, Track: In Silico Drug Design-Bioactive Molecules

The University of Milan, in collaboration with Université Paris Cité, offers an international educational pathway that leads to a Double Degree (DD): a Master's Degree in Chemical Sciences (awarded by the University of Milan) and a Master's Degree in Bio-Informatics, Track: In Silico Drug Design-Bioactive Molecules (awarded by Université Paris Cité). This program aims to provide advanced training in physical chemistry, molecular modeling, and methodologies for the design and development of new drugs.

The program is semester-based and includes a well-defined set of educational activities designed to meet the learning objectives of both degree programs. Educational activities will take place in the second semester at the University of Milan and in the first and third semesters at Université Paris Cité. The fourth semester, dedicated entirely to the thesis project, can be completed at the University of Milan, Université Paris Cité, or another university with a student mobility agreement.

The thesis must comply with the regulations of each institution, and for students completing their thesis abroad, an internal advisor must be appointed. The final thesis must be written in English.

Course Distribution for the 1st and 2nd Years:

FIRST YEAR, 1st SEMESTER (PARIS)

-> Students will attend the following courses at Université Paris Cité: Methodology (9 ECTS, 6 ECTS INF/01, 3 ECTS CHIM/02); Chemistry (12 ECTS, CHIM/06); Molecular Modeling and Chemoinformatics (9 ECTS, CHIM/02).

FIRST YEAR, 2nd SEMESTER (MILAN)

Students will attend the following courses at the University of Milan: Chemometrics (6 ECTS, CHIM/01); Protein Engineering and Molecular Enzymology (6 ECTS, BIO/10); Medicinal Chemistry (6 ECTS, CHIM/08); Simulation Modeling of Biomolecules (6 ECTS, CHIM/02); C Language Programming or Synthetic Methods in Biotechnology or any course available in Milan during the semester (6 ECTS).

SECOND YEAR, 1st SEMESTER (PARIS)

Students will attend the following courses at Université Paris Cité: Application in Drug Design (6 ECTS, part of the thesis laboratory), Structural and AI Analysis for Drug Design (9 ECTS, CHIM/02); Virtual Screening: Structure & Ligand-Based (6 ECTS, CHIM/06); Space Analysis of Molecules (6 ECTS, CHIM/04); Preparation for Research in Drug Design (3 ECTS, part of the thesis laboratory).

SECOND YEAR, 2nd SEMESTER: Thesis laboratory and final examination (30 ECTS).

DOUBLE DEGREE PROGRAM DD2

Master's Degree in Chemical Sciences and Master's in Chemistry, Specialty: Chemoinformatics

A maximum of 10 students may be admitted to this international track.

The University of Milan, in collaboration with the University of Strasbourg, offers an international educational pathway that leads to a Double Degree (DD): a Master's Degree in Chemical Sciences (awarded by the University of Milan) and a Master's Degree in Chemistry, Specialty: Chemoinformatics (awarded by the University of Strasbourg).

This program aims to provide advanced training in physical and computational chemistry, molecular modeling, and chemoinformatics.

The program is semester-based and includes a well-defined set of educational activities designed to meet the learning objectives of both degree programs. Educational activities will take place in the first and second semesters at the University of Milan and in the third semester at the University of Strasbourg. The fourth semester, dedicated entirely to the thesis project, can be completed at the University of Milan, the University of Strasbourg, or another university with a student mobility agreement.

The thesis must comply with the regulations of each institution, and for students completing their thesis abroad, an internal advisor must be appointed. The final thesis must be written in English.

Course Distribution for the 1st and 2nd Years:

FIRST YEAR (MILAN): Soft Matter: From Theory to Applications (9 ECTS, CHIM/02); Hard Matter: Fundamentals and Applications (9 ECTS, CHIM/02); C Language Programming (6 ECTS, INF/01) or any computer programming course available in Milan (6 ECTS); Mathematical Methods Applied to Chemistry (6 ECTS, MAT/01-09); Advanced Physical Methods in Organic Chemistry (6 ECTS, CHIM/06); Simulation Modeling of Biomolecules (6 ECTS, CHIM/02); Databases and Elements of Chemoinformatics (6 ECTS, CHIM/06). Additionally, students must choose an elective course worth 6 ECTS, acquire 3 ECTS for English language proficiency (B2 level), and 3 ECTS for the thesis project.

SECOND YEAR, 1st SEMESTER (STRASBOURG)

Students will attend the following courses at the University of Strasbourg: Chemoinformatics (9 ECTS, 6 ECTS CHIM/01, 3 ECTS CHIM/02); Modeling (9 ECTS, CHIM/02); Technology and Applications (12 ECTS, 6 ECTS CHIM/04, and 6 ECTS for the modules Drug Discovery (3 ECTS) and Internet Technology (3 ECTS) for the thesis project).

SECOND YEAR, 2nd SEMESTER: Thesis laboratory and final examination (30 ECTS).

CURRICULUM: [FBC-A] ANALYTICAL AND PHYSICAL CHEMISTRY SCIENCES AND TECHNOLOGIES

Qualifying Training Objectives

CHEMICAL-ANALYTICAL AND CHEMICAL-PHYSICAL SCIENCES AND TECHNOLOGIES

This curriculum aims to provide knowledge of the theoretical principles underlying the fundamental phenomena of chemical processes, the structural and functional characteristics of molecules and materials, and the practical and instrumental aspects, including application examples, of the main techniques for qualitative and quantitative determination of sample composition and for investigating the properties of molecules and materials.

Skills acquired

The courses included in this curriculum will enable students to:

- Acquire knowledge and skills related to the main electroanalytical, spectroscopic, spectrometric, chromatographic, diffractometric, and thermal techniques.
- Understand the principles of soft matter, hard condensed matter, state-of-the-art experimental data simulation methods, photochemistry, advanced electrochemistry, heterogeneous catalysis, surface and interfacial chemistry, and quantum chemistry.
- Predict, investigate, and interpret the behavior of both simple and complex systems using existing or ad hoc-developed theoretical, computational, and experimental methods.
- Comprehend the molecular and statistical mechanical properties of highly complex systems and their evolution over time, with a view to exploiting and applying them in the context of sustainability and circularity of methods and processes.
- Provide tools and methods for the characterization of complex matrices (biological systems, natural substances, industrial products, etc.), the development of advanced devices, and the protection of the environment and cultural heritage.
- Learn best operational practices in analytical laboratories, fundamental methods for assessing data quality, and criteria for designing and selecting experimental methods, also within a Quality by Design framework.

Professional profile and employment possibilities

- Research organisations, public administrations, professional companies and national or international consultancy firms, companies, industries and research, analysis, quality control and certification laboratories as well as work environments

requiring high qualifications in chemistry or related sciences.

- Companies, chemical and chemical-pharmaceutical industries and laboratories for analysis, quality control and certification as well as in working environments requiring high qualifications in quality management.
- Research organisations, industries and laboratories for research, analysis and work environments requiring high qualifications in chemistry or related sciences.
- Information and scientific dissemination for cosmetic, pharmaceutical, food, plastics, dyes, detergents, glues or environmental companies, or in general for all companies in the chemical sector and/or specialist journals.

In addition, it is possible to continue studies in Doctorate courses or Specialisation Schools in the scientific field.

2nd COURSE YEAR (available as of academic year 2026/27) Elective courses Curriculum-specific elective courses for ANALYTICAL AND PHYSICAL CHEMISTRY SCIENCES AND TECHNOLOGIES

TABLE A4

Students must indicate courses for a total of 12 credits, freely choosing from all courses offered by the University, provided they are relevant to their educational plan. The consistency of the chosen courses with the study plan will be evaluated by the Study Plan Committee.

The Teaching Board recommends selecting optional courses listed in Table A4 or, alternatively, Related and Supplementary courses from Table A3.

CURRICULUM: [FBC-B] MOLECULES AND MATERIALS: DESIGN, SYNTHESIS AND APPLICATIONS

Qualifying Training Objectives

CURRICULUM B: MOLECULES AND MATERIALS: DESIGN, SYNTHESIS AND APPLICATIONS

This curriculum intends to provide solid and in-depth knowledge in the field of inorganic and organic chemistry advanced in their theoretical and experimental aspects to acquire the ability to design and perform efficient and sustainable syntheses for different applications, including those of high value-added molecules characteristic of related sectors in general to life sciences and new technologies.

Skills acquired

The courses available in this curriculum will allow the student to::

- deepen, at an advanced level, the knowledge of inorganic, organic and bioorganic reactions, their mechanisms and stereochemical implications;
- deepen the techniques based on the qualitative theory of molecular orbitals, useful in the study of the electronic structure, molecular geometry and reactivity of the complexes, to be able to qualitatively describe also at a theoretical level the electronic structure of the transition metal complexes and employ this information to rationalize or predict their geometry and reactivity;
- develop the ability to plan the synthesis of complex molecules, also using innovative digital tools, such as those dedicated to retrosynthetic analysis;

- develop the ability to design, also with computational methods, molecular structures with predefined properties depending on their use, for example in the medical, pharmacological and biotechnological fields or in that of new materials.

Professional profile and employment possibilities

- Research organisations, public administrations, professional companies and national or international consultancy firms, companies, industries and research, analysis, quality control and certification laboratories as well as work environments requiring high qualifications in chemistry or related sciences.
- Companies, chemical and chemical-pharmaceutical industries and laboratories for analysis, quality control and certification as well as in working environments requiring high qualifications in quality management.
- Research organisations, industries and laboratories for research, analysis and work environments requiring high qualifications in chemistry or related sciences.
- Information and scientific dissemination for cosmetic, pharmaceutical, food, plastics, dyes, detergents, glues or environmental companies, or in general for all companies in the chemical sector and/or specialist journals.

In addition, it is possible to continue studies in Doctorate courses or Specialisation Schools in the scientific field.

Protein biochemistry Course borrowed from LM in Molecular Biology of the Cell	6	BIO/10
Protein engineering and molecular enzymology	6	BIO/10
Protein physics	6	FIS/03
Technological properties of minerals, cements and ceramics (Course borrowed from LM in Earth Sciences)	6	GEO/06, GEO/09
Toxicological Chemistry	6	MED/44, CHIM/08

2nd COURSE YEAR (available as of academic year 2026/27) Elective courses Curriculum-specific elective courses for MOLECULES AND MATERIALS: DESIGN, SYNTHESIS AND APPLICATIONS

Activities of your choice

Courses in English are taught in English.

The student may take the exam in either English or Italian, at his or her own discretion.

TABLE B4

The student must choose 2 courses of his choice from 6 CFU (for a total of 12 CFU), choosing them in full freedom among all the courses activated by the University, as long as they are functional to the training project. The consistency of the choice with the training plan will be assessed by the Study Plans Commission.

The Teaching College recommends using the optional lessons listed in Table B4 or, if necessary, the Related and Integrative of Table B3.

Advanced methods in organic synthesis		CHIM/06
Advanced physical methods in organic chemistry	6	CHIM/06
Analytical technologies for the diagnostics of cultural heritage	6	CHIM/01
(Course activated in alternate years: active in 2025-2026, inactive in 2026-2027)	U	CIIIVI/01
Bioinorganic Chemistry: Enzyme Systems and Investigation Methods	6	CHIM/03
(Course activated in alternate years: inactive in 2025-2026, active in 2026-2027)		
Bioorganic Chemistry		CHIM/06
Catalysis: Fundamentals and Applications for the Environment and the Circular Economy		CHIM/02
Catalytic Methodologies in Organic Synthesis	6	CHIM/06
Chemical-physical transformations of solids	6	CHIM/02
(Course activated in alternate years: not active in 2025-2026, active in 2026-2027)		CTTT (/OC
Chemistry of natural products		CHIM/06
Chemometrics		CHIM/01
Crystal chemistry		CHIM/02
Databases and Elements of Chemoinformatics		CHIM/06
Electrochemistry	6	CHIM/02
Electronic properties of advanced materials	6	CHIM/02
(Course activated in alternate years: active in 2025-2026, inactive in 2026-2027)		
Environmental Chemistry		CHIM/01
Environmental impact assessment: management of contaminants and analysis tools		CHIM/01
History of Chemistry and Elements of Didactics		CHIM/03
Homogeneous Catalysis: Industrial Applications		CHIM/03
Metallorganic Chemistry		CHIM/03
Methods in Chemical Biology		CHIM/06
Molecular modeling		CHIM/02
Molecular spectroscopy		CHIM/02
Nanoparticles: chemistry and applications		CHIM/03, CHIM/06
Photochemistry		CHIM/02
Photoluminescence and magnetic resonance: applications in inorganic and organometallic chemistry	6	CHIM/01
Physical-organic chemistry	6	CHIM/06
(Activated starting from 2026/2027)	Ū	CIIIIVI/00
Plastics degradation and its environmental impact	6	CHIM/04
(Course borrowed from LM Sustainable Industrial Chemistry)		
Polymer science		CHIM/04
Quantum chemistry		CHIM/02
Simulation and modeling of biomolecules	6	CHIM/02
Solid state Chemistry	6	CHIM/03
(Course activated in alternate years: active in 2025-2026, inactive in 2026-2027)		
Supramolecular chemistry		CHIM/03
Synthesis and applications of inorganic materials		CHIM/03
Technology-driven organic synthesis		CHIM/06
Theoretical chemistry with elements of quantum computing	6	CHIM/02
Tools and techniques for the analysis of complex matrices	6	CHIM/01
(Course activated in alternate years: active in 2025-2026, inactive in 2026-2027)	Ů	G1111/1/01
