

UNIVERSITA' DEGLI STUDI DI MILANO PROGRAMME DESCRIPTION - ACADEMIC YEAR 2020/21 MASTER DEGREE

Agro-environmental Sciences (Classe LM-73) Enrolled from 2019/20 academic year

| HEADING | |
|--------------------------------------|-------------------------------------|
| Degree classification - Denomination | LM-73 Forestry and environment |
| and code: | |
| Degree title: | Dottore Magistrale |
| Length of course: | 2 years |
| Credits required for admission: | 180 |
| Total number of credits required to | 120 |
| complete programme: | |
| Years of course currently available: | 1st, 2nd |
| Access procedures: | Open, subject to entry requirements |
| Course code: | G57 |

PERSONS/ROLES

Head of Study Programme

Prof. Luca Bechini

Tutors - Faculty

Tutor per i piani di studio: A-E Maria Laura Deangelis F-Q Gianluca Galassi

R-Z Guido Sali

CHARACTERISTICS OF DEGREE PROGRAMME

General and specific learning objectives

The Master's Degree Course in Agro-environmental Sciences aims at forming graduates with a wide cultural and scientific background in the fields of biology, chemistry, engineering, and economy. Specific objective of the Master's Degree Course is to form a graduate endowed with the scientific and technical tools useful to operate in the field of planning and management of the rural and forest environment and landscape, able to match economic efficiency with the protection and enhancement of natural resources. The graduate in Agro-environmental Sciences will have a valuable scientific and operational preparation in the disciplines that concern the protection of natural resources and the technological and economic features of rural and forest territories; he/she will also possess the cultural tools for a systemic analysis of the environment in all its biotic and abiotic components and of their interactions. The curriculum foresees a tight integration among the different teachings in order to facilitate the development of a clear multidisciplinary vision of the problems, and the use of diversified teaching methodologies and materials. These comprehend, in addition to frontal lessons and use of the most up-to-date textbooks for the different disciplines, study of scientific papers and participation to practical laboratory exercises and infield activities, with use of state-of-the-art tools for data collection, analysis and elaboration. The verification of learning outcomes takes place, in addition to the usual oral and written tests, by discussing project works, individually or collectively elaborated in groups of few students, with the aim of efficiently verifying the expected learning outcomes and the achievement of critical capacity.

Expected learning outcomes

The Graduate in Agro-environmental Sciences will acquire scientific and operational skills in the disciplines inherent to the preservation of natural resources and to the technological and economical aspects typical of the rural territory. He/she will also possess the cultural tools to conduct a systemic environmental analysis considering biotic and abiotic components as well as their interactions. Such professional will therefore be able to: examine and solve, by the use of advanced

computational tools to represent and analyze environmental and territorial data as well as of mathematical models, problems concerning the planning and the management of natural resources; plan and coordinate actions to preserve and valorize rural environments and territories; conduct activities of basic and applied research and of promotion and development of scientific and technological innovation aimed at planning, preserving and valorizing the natural resources and at promoting the sustainable development of the rural areas; evaluate the rural and forest resources and the environmental impact of agricultural activities through the elaboration of models exploiting also conceptual and methodological tools of economics, law and environmental planning; use the modern technologies for the study and monitoring of environment and land; conduct complex and interdisciplinary coordination and guidance activities referable to one or more of the following sectors: sustainable planning and management, eco-certification and preservation of rural and forest resources; design and manage soil protection and forest engineering works; design and manage urban and peri-urban green areas; design and manage works aimed at the amelioration, reconstitution and ecological restoration of degraded environments; develop projects for the management of protected areas and ecological territorial planning; operate in the different fields with great autonomy, carrying out coordination functions and assuming managerial responsibilities.

Professional profile and employment opportunities

The professional profile of the Graduate in Agro-environmental Sciences merges deep knowledge of chemistry, biology and physiology with that of agro-technologies and agricultural economy and engineering, so characterizing a professional able to respond to the requirement of highly-qualified professional from Administrations and Public Bodies as well as to those of enterprises and professional services. Graduates will meet career opportunities in the territorial and environmental fields, with particular regard to the planning and sustainable management of rural and forest environments and areas, environmental protection, analysis and monitoring of agro-environmental systems, planning and implementation of interventions aimed at defending and preserving soils and water resources for the restoration and conservation of the biotic and abiotic components of eco-systems, and in the different fields of agricultural engineering. In particular, thanks to the acquired skills, Graduates will find career opportunities in:

- national and regional services for the protection and development of the environment and territory (Government technical services, national and regional environmental agencies, basin authorities, regional, provincial and municipal technical services and departments, reclamation and irrigation consortia, mountain communities, consortia of mountain catchment areas);
- laboratories, professional offices, and service companies active in the fields of both environmental and territorial planning and management and environmental monitoring and recovery;
- companies operating in the field of waste management and disposal and of environmental remediation;
- companies operating in the field of construction and maintenance of green areas and of intervention for the protection soil and water resources;
- environment and territory branches of large companies;
- freelance activities in the agricultural, agroforestry, and environmental fields.

Notes

A minimum English language proficiency at level B1 within the Common European Framework of Reference for Languages (CEFR) is an admission requirement.

The English level B1 is assessed by the University Language Centre SLAM throughout the admission process in the following ways:

language certificate achieved no more than three years prior to the submission, at level B1 or B2 or higher, recognised by the University (the list of recognised language certificates can be found at: https://www.unimi.it/en/study/language-proficiency/placement-tests-entry-tests-and-english-courses). The language certificate must be uploaded during the admission process;

level of English assessed by SLAM (and/or through a computer-based test) during the bachelor's degrees obtained at the University of Milan. English levels B1 and B2 achieved no more than four years previously are deemed valid. The verification is automatic with no need to attach any certificate during the application phase;

entry test, organised by SLAM, which will take place on 8 september 2020 at 9.00. If the language certificate or level is not valid, the candidate will be summoned for the entry test through the admission procedure. Candidates who fail the entry test will not be admitted to the master's degree programme and cannot take the test again.

To obtain the degree, students are required to demonstrate an English language proficiency at level B2 within the Common European Framework of Reference for Languages (CEFR). This level can be assessed in the following ways:

by submitting the language certificate achieved no more than three years prior to the submission, at level B2 or higher, recognised by the University (the list of recognised language certificates can be found at https://www.unimi.it/en/study/language-proficiency/placement-tests-entry-tests-and-english-courses). The language certificate must be uploaded during the admission process;

by taking the Placement Test, organised by SLAM exclusively during the first year, from October to January. Students who fail to reach level B2 will have to attend an English course organised by SLAM. The Placement Test is compulsory for all students who do not have a valid language certificate.

Students who do not take the Placement Test within the deadline and students who fail the SLAM end-of-course test within six attempts will have to obtain a language certificate within the year in which the language exam is scheduled.

EXPERIENCE OF STUDY ABROAD AS PART OF THE TRAINING PROGRAM

The University of Milan supports international mobility by providing its students with the opportunity to spend study and internship periods abroad. It is a unique chance to enrich your educational path in a new exciting environment.

The agreements entered into by the University with over 300 universities from 30 different countries under the European Erasmus+ programme allow regularly enrolled students to carry out part of their studies at one of the partner universities or to undertake internships at companies, training and research centres and other organizations.

Similar international mobility opportunities are provided outside Europe, through agreements with a number of prestigious institutions.

Study and internships abroad

The Course of study in Agro-Environmental Sciences gives many opportunities for stages abroad mainly through the Erasmus+ programme. About 30 foreign Universities of the EU are involved in this students exchange. Globally every year about 5 students of this course of study make a stage in these universities. The areas of study which can be followed by the students abroad are almost all those included in this course of study. In general, students who make a stage abroad attend local courses or participate in research for the preparation of their thesis.

The examination scores and the related UFC obtained in the partner universities are almost entirely acknowledged by our university for the curriculum studies.

Other possibilities exist in terms of cultural exchange with non EU universities (in China, Japan, Latin America) not involved in the Erasmus programme.

How to participate in Erasmus mobility programs

How to participate in Erasmus+ mobility programmes

The students of the University of Milan can participate in mobility programmes, which last 3 to 12 months, through a public selection procedure.

Ad hoc commissions will evaluate:

- the candidate's proposed study programme abroad
- his/her foreign language proficiency
- the reasons behind his/her application

Call for applications and informative meetings

The public selection generally begins around February each year with the publication of a call for applications specifying the destinations, with the respective programme duration, requirements and online application deadline.

Every year, before the deadline for the call, the University organizes informative meetings to illustrate opportunities and rules for participation to students.

Erasmus+ scholarship

The European Union grants the winners of the Erasmus+ programme selection a scholarship to contribute to their mobility costs, which is supplemented by the University funding for disadvantaged students.

Language courses

Students who pass the selections for mobility programmes can benefit from intensive foreign language courses offered each year by the University.
