

UNIVERSITA' DEGLI STUDI DI MILANO
PROGRAMME DESCRIPTION - ACADEMIC YEAR 2020/21
MASTER DEGREE
Crops and Plant Sciences (Classe LM-69)
Enrolled from 2019/20 academic year

HEADING

Degree classification - Denomination and code:	LM-69 Agriculture
Degree title:	Dottore Magistrale
Curricula currently available:	Crop Production / Plant Biotechnology
Length of course:	2 years
Credits required for admission:	180
Total number of credits required to complete programme:	120
Years of course currently available:	1st , 2nd
Access procedures:	Open, subject to entry requirements
Course code:	G59

PERSONS/ROLES

Head of Study Programme

Prof. Antonio Ferrante

Tutors - Faculty

Tutor per i piani di studio:

A-F Laura Rossini

G-M Daniele Bassi

N-R Paola Casati

S-Z Gian Attilio Sacchi

CHARACTERISTICS OF DEGREE PROGRAMME

General and specific learning objectives

1. The master's degree course in Crops and Plant Sciences, belonging to the master's degree class in Agricultural Sciences and Technologies (Class LM-69). The aim of the master is to prepare graduates with a wide cultural background, scientific training with particular reference to the method; professional preparation in the areas of plant production, their protection, including ornamental and urban green systems, landscaping and environmental recovery / remediation, as well as in the protection of plants from adversity to obtain competitive and sustainable production. 2. The training received will give to the graduates an in-depth knowledge of current agricultural systems and greenery, with purposes that are both increase yield and protection of the territory and the environment. The degree course in Crops and Plant Sciences is characterized by a strong specialization in scientific and design aspects in the wide sector of cultivation systems, technical and recreational green areas, and the sustainability of production processes. 3. In particular, master's degrees will provide: • qualified skills to plan and manage research and innovative processes, both independently and in work groups, taking on project and structure responsibilities; • in-depth knowledge of the agricultural environment, and agro-ecosystems with their main guiding variables, such as climatic, agro-meteorological and pedological. • qualified knowledge of biology, physiology, genetics and molecular biology of plants and their pests and related interactions, essential for obtaining the quantitative-qualitative improvement of agricultural plant production, for rationally planning the defense and for safeguarding soil resources, using traditional and innovative technologies; • acquired the methodologies, including laboratory, for the quality control of the supply chain of the various plant productions and will know how to design, manage and certify the systems and processes of plant production and plant protection; • skills to program and manage the strategies, technologies and means used in the production and defense of plants and to minimize the impact that the means themselves can have on the environment; • skills

to be able to organize and manage scientific research plans in the public and private sector; • skills for managing traditional and innovative genetic improvement programs; • command of a European language, usually English.

Expected learning outcomes

Graduate will gain the ability to solve new problems not previously codified, also in the interdisciplinary and operational management of complex systems. In particular, the graduate will be able to independently design and manage farms, plan agricultural systems, and green systems on a territorial scale, obtain quality agricultural production according to specific characteristics required by users, set up business management programs and territorial oriented to the sustainability of agricultural activity also internationally.

Professional profile and employment opportunities

This professional figure will find employment, also with reference to the group 2.3.1.3 (Agronomists and assimilated) of the ISTAT classification of professions (intellectual, scientific, and highly specialized professions, for which a high level of knowledge and experience is required; their tasks consist in enriching existing knowledge by promoting and conducting scientific research; in interpreting concepts, scientific theories and norms; in teaching them systematically; in applying them to the solution of concrete problems), in the following sectors: in the free profession, after passing the state exam, enrolling in the Register of Agronomy and Forestry Doctors; in public research bodies, as responsible for the qualitative and quantitative improvement of agricultural crops and their defense; in the regional phytosanitary services, as inspectors for goods in transit and for nurseries or as officials in charge of drafting the regional disease protection directives; in the industries producing technical means for agriculture (seeds, fertilizers, plant protection products, etc.), with research or consultancy tasks for operators; in large-scale organized distribution, as responsible for the planning of agricultural plant production, the drafting of production regulations and the control of the healthiness of food; in the design, management and defense of ornamental, recreational and sports green; in the development and organization of technical assistance services; in rural development projects, including on an international scale, by integrating productive, managerial, environmental enhancement, and sustainability of agricultural activities skills.

Notes

A minimum English language proficiency at level B1 within the Common European Framework of Reference for Languages (CEFR) is an admission requirement.

The English level B1 is assessed by the University Language Centre SLAM throughout the admission process in the following ways:

language certificate achieved no more than three years prior to the submission, at level B1 or B2 or higher, recognised by the University (the list of recognised language certificates can be found at: <https://www.unimi.it/en/study/language-proficiency/placement-tests-entry-tests-and-english-courses>). The language certificate must be uploaded during the admission process;

level of English assessed by SLAM (and/or through a computer-based test) during the bachelor's degrees obtained at the University of Milan. English levels B1 and B2 achieved no more than four years previously are deemed valid. The verification is automatic with no need to attach any certificate during the application phase;

entry test, organised by SLAM, which will take place on 8 september 2020 at 9.00. If the language certificate or level is not valid, the candidate will be summoned for the entry test through the admission procedure. Candidates who fail the entry test will not be admitted to the master's degree programme and cannot take the test again.

To obtain the degree, students are required to demonstrate an English language proficiency at level B2 within the Common European Framework of Reference for Languages (CEFR). This level can be assessed in the following ways:

by submitting the language certificate achieved no more than three years prior to the submission, at level B2 or higher, recognised by the University (the list of recognised language certificates can be found at <https://www.unimi.it/en/study/language-proficiency/placement-tests-entry-tests-and-english-courses>). The language certificate must be uploaded during the admission process;

by taking the Placement Test, organised by SLAM exclusively during the first year, from October to January. Students who fail to reach level B2 will have to attend an English course organised by SLAM. The Placement Test is compulsory for all students who do not have a valid language certificate.

Students who do not take the Placement Test within the deadline and students who fail the SLAM end-of-course test within six attempts will have to obtain a language certificate within the year in which the language exam is scheduled.

EXPERIENCE OF STUDY ABROAD AS PART OF THE TRAINING PROGRAM

The University of Milan supports international mobility by providing its students with the opportunity to spend study and internship periods abroad. It is a unique chance to enrich your educational path in a new exciting environment.

The agreements entered into by the University with over 300 universities from 30 different countries under the European

Erasmus+ programme allow regularly enrolled students to carry out part of their studies at one of the partner universities or to undertake internships at companies, training and research centres and other organizations.

Similar international mobility opportunities are provided outside Europe, through agreements with a number of prestigious institutions.

Study and internships abroad

The Course of study in Plant Production and Defense gives many opportunities for stages abroad mainly through the Erasmus+ programme. About 30 foreign Universities of the EU are involved in this students exchange. Globally every year about 10 students of this course of study make a stage in these universities. The areas of study which can be followed by the students abroad are almost all those included in this course of study. In general, students who make a stage abroad attend local courses or participate in research for the preparation of their thesis.

The examination scores and the related UFC obtained in the partner universities are almost entirely acknowledged by our university for the curriculum studies.

Other possibilities exist in terms of cultural exchange with non EU universities (in China, Japan, Latin America) not involved in the Erasmus programme.

The Master degree in Crop and Plant Science is partner of the double degree in the framework of Erasmus Mundus Master Program in Plant Breeding – emPlant+ (EMJMD).

How to participate in Erasmus mobility programs

How to participate in Erasmus+ mobility programmes

The students of the University of Milan can participate in mobility programmes, which last 3 to 12 months, through a public selection procedure.

Ad hoc commissions will evaluate:

- the candidate's proposed study programme abroad
- his/her foreign language proficiency
- the reasons behind his/her application

Call for applications and informative meetings

The public selection generally begins around February each year with the publication of a call for applications specifying the destinations, with the respective programme duration, requirements and online application deadline.

Every year, before the deadline for the call, the University organizes informative meetings to illustrate opportunities and rules for participation to students.

Erasmus+ scholarship

The European Union grants the winners of the Erasmus+ programme selection a scholarship to contribute to their mobility costs, which is supplemented by the University funding for disadvantaged students.

Language courses

Students who pass the selections for mobility programmes can benefit from intensive foreign language courses offered each year by the University.

Desk opening hours: Monday to Friday 9 am - 12 noon

1st COURSE YEAR Core/compulsory courses/activities common to all curricula		
Learning activity	Ects	Sector
English proficiency B2 (3 ECTS)	3	ND
Herbaceous cropping systems	6	AGR/02
Microbial biotechnologies applied to plant production	6	AGR/16
Physiology of plant production	6	AGR/13
Plant protection management	6	AGR/12
Tree growing strategies	6	AGR/03
Virology and physiopathological biotechnologies	6	AGR/12
Total compulsory credits		39
2nd COURSE YEAR Core/compulsory courses/activities common to all curricula		

Learning activity	Ects	Sector
Final exam	42	NA
Total compulsory credits	42	
COURSE YEAR UNDEFINED Core/compulsory courses/activities common to all curricula		
Learning activity	Ects	Sector
Other useful knowledge for entering the world of work	3	NA
Total compulsory credits	3	
Further elective courses common to all curricula		

ACTIVE CURRICULA LIST

Crop Production Course years currently available: 1st , 2nd
Plant Biotechnology Course years currently available: 1st , 2nd

CURRICULUM: [G59-C] Crop Production

2nd COURSE YEAR Core/compulsory courses/activities Curriculum-specific features Crop Production		
Learning activity	Ects	Sector
Applied entomology	6	AGR/11
Basic statistics and experimental design	6	AGR/02
Plant breeding	6	AGR/07
Protected cultivation systems	6	AGR/04
Total compulsory credits	24	

CURRICULUM: [G59-D] Plant Biotechnology

2nd COURSE YEAR Core/compulsory courses/activities Curriculum-specific features Plant Biotechnology		
Learning activity	Ects	Sector
Advanced plant pathology	6	AGR/12
Development of crop ideotypes	6	AGR/07
Molecular methods for plant breeding	6	AGR/07
Plant molecular biology	6	AGR/07
Total compulsory credits	24
