HEADING

Degree classification - Denomination and code: LM-69 Agriculture

Degree title: Dottore Magistrale

Curricula currently available: Crop Production / Plant Biotechnology

Length of course: 2 years

Credits required for admission: 180

Total number of credits required to complete programme: 120

Years of course currently available: 1st, 2nd

Access procedures: Open, subject to entry requirements

Course code: G59

PERSONS/ROLES

Head of Study Programme
Prof. Antonio Ferrante

Tutors - Faculty
Tutor per i piani di studio:
lettera iniziale cognome studenti A-F: Prof.ssa Laura Rossini
lettera iniziale cognome studenti G-M: Prof.ssa Gabriella De Lorenzis
lettera iniziale cognome studenti N-R: Prof.ssa Paola Casati
lettera iniziale cognome studenti S-Z: Prof.ssa Daniela Lupi

CHARACTERISTICS OF DEGREE PROGRAMME

General and specific learning objectives
1. The master's degree course in Crops and Plant Sciences, belonging to the master's degree class in Agricultural Sciences and Technologies (Class LM-69). The aim of the master is to prepare graduates with a wide cultural background, scientific training with particular reference to the method; professional preparation in the areas of plant production, their protection, including ornamental and urban green systems, landscaping and environmental recovery / remediation, as well as in the protection of plants from adversity to obtain competitive and sustainable production. 2. The training received will give to the graduates an in-depth knowledge of current agricultural systems and greenery, with purposes that are both increase yield and protection of the territory and the environment. The degree course in Crops and Plant Sciences is characterized by a strong specialization in scientific and design aspects in the wide sector of cultivation systems, technical and recreational green areas, and the sustainability of production processes. 3. In particular, master's degrees will provide: • qualified skills to plan and manage research and innovative processes, both independently and in work groups, taking on project and structure responsibilities; • in-depth knowledge of the agricultural environment, and agro-ecosystems with their main guiding variables, such as climatic, agro-meteorological and pedological. • qualified knowledge of biology, physiology, genetics and molecular biology of plants and their pests and related interactions, essential for obtaining the quantitative-qualitative improvement of agricultural plant production, for rationally planning the defense and for safeguarding soil resources, using
expected learning outcomes

Graduate will gain the ability to solve new problems not previously codified, also in the interdisciplinary and operational management of complex systems. In particular, the graduate will be able to independently design and manage farms, plan agricultural systems, and green systems on a territorial scale, obtain quality agricultural production according to specific characteristics required by users, set up business management programs and territorial oriented to the sustainability of agricultural activity also internationally.

Professional profile and employment opportunities

This professional figure will find employment, also with reference to the group “Agronomists and assimilated” of the ISTAT classification of professions (intellectual, scientific, and highly specialized professions, for which a high level of knowledge and experience is required; their tasks consist in enriching existing knowledge by promoting and conducting scientific research; in interpreting concepts, scientific theories and norms; in teaching them systematically; in applying them to the solution of concrete problems), in the following sectors: in the free profession, after passing the state exam, enrolling in the Register of Agronomy and Forestry Doctors; in public research bodies, as responsible for the qualitative and quantitative improvement of agricultural crops and their defense; in the regional phytosanitary services, as inspectors for goods in transit and for nurseries or as officials in charge of drafting the regional disease protection directives; in the industries producing technical means for agriculture (seeds, fertilizers, plant protection products, etc.), with research or consultancy tasks for operators; in large-scale organized distribution, as responsible for the planning of agricultural plant production, the drafting of production regulations and the control of the healthiness of food; in the design, management and defense of ornamental, recreational and sports green; in the development and organization of technical assistance services; in rural development projects, including on an international scale, by integrating productive, managerial, environmental enhancement, and sustainability of agricultural activities skills.

Initial knowledge required

Admission requirements

The programme is open, but a B1 level in English is required for admission to the first year, and B2 for the second year. Graduates of class L-25 (Agricultural sciences and technologies), as well as the corresponding class pursuant to Ministerial Decree 509/99, may access the programme if they have earned at least 30 credits in the following academic fields: BIO/01 - General botany, BIO/02 - Systematic botany, BIO/03 - Environmental and applied botany, BIO/04 - Plant physiology, BIO/05 Zoology, BIO/13 Applied biology, CHIM/03 - General and inorganic chemistry, CHIM/06 - Organic chemistry, FIS/01 to FIS/07 MAT/01 to MAT/09 INF/01 Computer science, ING-INF/05 - Data processing systems, SECS-S/01 Statistics. Graduates from classes other than class L-25, who have earned at least 60 credits in the following academic fields, may also access the programme:

AGR/01 - Economy and rural appraisal, AGR/02 - Agronomy and herbaceous crops, AGR/03 - General arboriculture, AGR/04 - Horticulture and floriculture, AGR/05 - Forest management and forestry, AGR/07 - Agricultural genetics, AGR/08 - Agricultural hydraulics, AGR/09 - Agricultural mechanics, AGR/10 - Rural constructions and agro-forestry territory, AGR/11 - General and applied entomology, AGR/12 - Plant pathology, AGR/13 - Agricultural chemistry, AGR/14 - Pedology, AGR/15 - Food science and technology, AGR/16 - Agricultural microbiology, BIO/07 - Ecology, BIO/18 - Genetics, BIO/19 - General microbiology, CHIM/01 - Analytical chemistry, CHIM/12 - Environmental and cultural heritage chemistry, GEO/02 - Stratigraphic and sedimentological geology, GEO/04 - Physical geography and geomorphology, GEO/06 - Mineralogy, GEO/07 - Petrology and petrography, ICAR/06 - Topography and cartography, ICAR/15 - Landscape architecture, IUS/03 - Agricultural law, IUS/14 - European Union law, SECS-P/08 - Economics and business management. Proficiency in English at a B1 level or higher, under the Common European Framework of Reference for Languages (CEFR), is required for admission. The B1-level requirement will be ascertained by the University Language Centre (SLAM) upon admission as follows:

- Language certificate obtained no more than 3 years prior to submission, of B1 or higher (for the list of language certificates recognized by the University, see the website: https://www.unimi.it/en/node/39267/). The certificate must be uploaded when submitting the online application;
- English level achieved during a Bachelor's degree programme through SLAM courses and tests. The test must have been passed within the last four years. It will be assessed by our offices, without the applicant having to attach any certificates;
- Placement test, delivered by SLAM https://www.unimi.it/en/node/39267/

All those who fail to submit a valid certificate or do not meet the required proficiency level will be invited to take the test through the admission procedure.

Candidates who do not sit or pass the placement test will have until 31 December 2022 to obtain and submit a recognized certificate to SLAM.

Students who do not meet the requirement by 31 December will not be admitted to the Master's degree programme and may not sit further tests.
Admission assessment

During application assessment, an admission board will evaluate the curricular requirements of the candidates and, if necessary, may ask for further documents.

The board may also highlight any shortcomings to be filled before the admission interview that will be held on the following dates:
- 23 September 2022, 2.00 pm;
- 12 January 2023, 2.00 pm.

The interviews will take place via videoconference. Connection details will be notified to the candidates within one week of the interview date.

Compulsory attendance

Attendance is strongly recommended for all training activities.

Degree programme final exams

The programme culminates in the final exam, where students will be required to present and discuss a paper (thesis) written under the guidance of a supervisor. The paper requires in-depth scientific study of the subject matter. The workload must be in line with the number of credits (CFU) awarded for theses under the programme regulations, i.e. 42. The examining board will take into account the student's entire course of studies. The final paper may be written in Italian or in English. Given the importance of the final exam in the curriculum, students should start working on their thesis no later than the second semester of Year I.

Notes

In order to obtain their degree, students must be proficient in English at a B2 level. This proficiency level may be certified as follows:
- Through a language certificate at a B2 level or higher, as submitted during the admission procedure;
- Through the entrance test (B2 level or higher);
- Through a Placement Test, which is delivered by the University Language Centre (SLAM) during year I only, from October to January (B2 or higher).

All students who do not have a B2 level or higher will be required to attend a B2-level English course, which will be delivered by the University Language Centre (SLAM), in the second semester of year I only.

Those who do not attend the course or do not pass the end-of-course test within six attempts must obtain a paid language certificate by graduation.

EXPERIENCE OF STUDY ABROAD AS PART OF THE TRAINING PROGRAM

The University of Milan supports international mobility by providing its students with the opportunity to spend study and internship periods abroad. It is a unique chance to enrich your educational path in a new exciting environment. The agreements entered into by the University with over 300 universities from the 27 EU member countries under the European Erasmus+ programme allow regularly enrolled students to carry out part of their studies at one of the partner universities or to undertake internships at companies, training and research centres and other organizations.

Similar international mobility opportunities are provided outside Europe, through agreements with a number of prestigious institutions.

Study and internships abroad

The Course of study in Crops and Plant Sciences gives many opportunities for stages abroad mainly through the Erasmus+ programme. About 30 foreign Universities of the EU are involved in this students exchange. The areas of study which can be followed by the students abroad are almost all those included in this course of study. In general, students who make a stage abroad attend local courses or participate in research for the preparation of their thesis. The examination scores and the related UFC obtained in the partner universities are almost entirely acknowledged by our university for the curriculum studies. Other possibilities exist in terms of cultural exchange with non EU universities (in China, Japan, Latin America) not involved in the Erasmus programme. The Master degree in Crop and Plant Science is partner of the double degree in the framework of Erasmus Mundus Master Program in Plant Breeding – emPlant+ (EMJMD) and Tokyo University of Agriculture and Technology. Informations at https://www.unimi.it/en/international/study-abroad/double-degree.

How to participate in Erasmus mobility programs

The students of the University of Milan can participate in mobility programmes, through a public selection procedure. Ad hoc commissions will evaluate:

• Academic career
• the candidate's proposed study programme abroad
• his/her foreign language proficiency
• the reasons behind his/her application

Call for applications and informative meetings

The public selection for Erasmus+ mobility for study generally begins around February each year with the publication of a call for applications specifying destinations and requirements. Regarding the Erasmus+ Mobility for Traineeship, the
University of Milan usually publishes two calls a year enabling students to choose a destination defined by an inter-institutional agreement or to find a traineeship position on their own.

The University organizes informative meetings to illustrate mobility opportunities and rules for participation.

**Erasmus+ scholarship**

The European Union grants the winners of the Erasmus+ programme selection a scholarship to contribute to their mobility costs, which may be supplemented by the University funding for disadvantaged students.

**Language courses**

Students who pass the selections for mobility programmes can benefit from intensive foreign language courses offered each year by the University Language Centre (SLAM).

### ACTIVE CURRICULA LIST

- **Crop Production** Course years currently available: 1st, 2nd
- **Plant Biotechnology** Course years currently available: 1st, 2nd

---

**CURRICULUM: [G59-C] Crop Production**

**Qualifying Training Objectives**

Learning objectives for this curriculum focus on agronomic experimentation planning and statistical data processing.
Students can major in the management of greenhouse farming systems, plant genetic improvement and applied entomological sciences.

**Skills acquired**

Students will learn how to manage complex cultivation systems in the open field and in greenhouses. They will have the skills to organize and manage agronomic comparison tests and to evaluate their results with scientific rigor through the application of static methods. They will be able to manage and follow classical and modern genetic improvement programmes. Finally, they will have the skills to use innovative tools in pest control.

**Professional profile and employment possibilities**

Graduates may work as agronomists in agricultural companies with multiple production lines, in technical equipment industries. They can manage comparison tests and conduct research in public and private centres, work in greenhouses and vertical farms. They may also work in the genetic improvement and seed production industry.

**CURRICULUM: [G59-D] Plant Biotechnology**

### Qualifying Training Objectives

Learning objectives for this curriculum focus on the basics of plant molecular biology and molecular approaches to genetic improvement and crop protection. Students will learn the fundamentals of crop idiotypes development with a view to increasing yield and quality.

**Skills acquired**

Students will learn specific skills in the field of molecular biology applied to biotechnological genetic improvement, molecular disease diagnosis, control and prevention.

**Professional profile and employment possibilities**

Graduates will be able to work in research and experimentation companies in the field of biotechnological genetic improvement, biocontrol and crop protection.
