

UNIVERSITA' DEGLI STUDI DI MILANO
MANIFESTO DEGLI STUDI A.A. 2022/23
LAUREA MAGISTRALE IN
DATA SCIENCE FOR ECONOMICS (Classe LM-data)
Enrolled from 2022/23 academic year

GENERALITA'

Classe di laurea di appartenenza:	LM Data Data science
Titolo rilasciato:	Dottore Magistrale
Durata del corso di studi:	2 anni
Crediti richiesti per l'accesso:	180
Cfu da acquisire totali:	120
Annualità attivate:	1°
Modalità accesso:	Libero con valutazione dei requisiti di accesso
Codice corso di studi:	B79

RIFERIMENTI

Presidente Collegio Didattico

prof.ssa Silvia Salini Vice-Presidente Collegio Didattico Prof. Stefano Montanelli

Docenti tutor

Prof. Alfio Ferrara (Academic guidance tutor)
Prof. Luca Rossini (Academic guidance tutor)
Prof. Domenico Massaro (Erasmus and international mobility tutor)
Prof. Giancarlo Manzi (Internship tutor)

CARATTERISTICHE DEL CORSO DI STUDI

Premessa

The master degree course in Data Science for Economics (DSE), entirely delivered in English, aims to provide advanced education on methodological methods and tools in computer science, statistics, and mathematics designed to interpret and analyze complex phenomena in the fields of economics. The course of study offers advanced skills through the study of emerging information technologies about data management and scalability of analysis systems in cloud environments, advanced statistical and mathematical techniques as well as machine learning techniques for information extraction and classification. Furthermore, the course addresses topics about economic theory, decision theory under conditions of uncertainty, econometrics, and time-series analysis.

A student of DSE will be able to customize/specialize the study plan according to her/his own inclination by choosing courses for a total of 18 ECTS within two different educational paths, namely the "Data Science" path and the "Economic Data Analysis" path.

The tutors of DSE will support the student in the choice by advising and providing information on the syllabi of the available courses. The "Data Science" path will allow the student to further enhance i) the STEM-oriented knowledge in the

field of computer science and/or statistical mathematics, and ii) the business-oriented knowledge (i.e., marketing, business organization, data strategy). The “Economic Data Analysis” path will allow the student to enhance specific knowledge in the economic fields, such as behavioral economics, health or labor economics, which make extensive use of empirical analyses on large databases of administrative nature.

The DSE course includes 3 compulsory credits of either transversal skills for Italian students or Italian language for the foreign students. There are also laboratories, partly provided by companies and organizations, to further improve the aptitude of students to problem solving and to make them aware and reactive to the challenges of the world of real work. The Degree Course is completed by a compulsory internship in companies or institutions, appropriately selected by the Faculty Board – Collegio Didattico of DSE. Finally, as elective courses, students can choose one or more activities, for 9 ECTS, among those offered by the University of Milan (laboratories or courses). The course of study ends with the dissertation work.

Given the multidisciplinary nature of their methodological-technical and practical education, the graduates in Data Science for Economics can be placed in various working sectors: small, medium, and large companies as well as research centers that are active in the information management sector, companies and public bodies involved in the management of large amounts of data, research and development laboratories, either public or private, innovative startups, healthcare companies, biomedical and pharmaceutical industries, consulting firms, Public Administration, National Statistical Institutes, Central Banks, large economic and financial consulting firms, banks.

Given their solid methodological preparation, the graduates in Data Science for Economics will be able to continue their academic education through a PhD in computer science, mathematics, statistics, and economics.

Obiettivi formativi generali e specifici

The graduates of the DSE MSc program will receive advanced education on methodologies and tools in computer science, quantitative and methodological notions to interpret and analyze economic phenomena using approaches that integrate business, market, and social media data. Among these, the MSc program focuses on the analysis of the effects of economic policies as well as the evaluation of actions and any other activity related to the sectors of economy, marketing, and business.

The DSE course enforces the construction of solid methodological bases by addressing topics of the economic theory, decision theory under uncertainty conditions, micro-econometric techniques, and time-series analysis. It also enforces the study of emerging data management technologies and scalability of analysis systems in cloud environments, as well as machine learning techniques for the extraction and classification of information.

In addition to these compulsory activities, the DSE course allows a student to autonomously customize/specialize the study plan according to her/his own inclination by choosing elective courses for a total of 18 ECTS within two different educational paths, namely the "Data Science" path and the "Economic Data Analysis" path. A first kind of specialization focus is about the aspects of methodological and technological innovation, advanced statistical methods, techniques of social media analysis, and textual analysis as well as their impact on the data-driven business. A further kind of specialization offers useful tools for economic applications in the area of policy or investment assessment, the study of production processes, and the evolution of social phenomena.

These specialization activities are geared, together with the external training activities, to the preparation of the dissertation and to the final exam. Therefore, the dissertation is considered as the fulfillment of the course of study and the apprenticeship that started with the choice of the educational path.

The courses of DSE, both compulsory and elective, include lectures and laboratory classes as well as autonomous project activities and individual activities to guarantee an adequate preparation also from a practical point of view, in close contact with case studies and real data.

The in-depth studies in mathematics, statistics, computer science, and economics highly qualify the educational project of Data Science for Economics and they prepare the students also for selective procedures of PhD and research programs in the areas of Data Science, Computer Science, and Economics.

Risultati di apprendimento attesi

The master's degree course intends to train specialists able to use mathematical statistical-computer techniques in the economic field by pursuing the following educational objectives: understand the mathematical tools relevant to tackle data science problems; understand the theory and the methodological-operational aspects of statistics and probability; understand the theory and the methodological aspects and the tools of the computer science discipline; understand the methodological-operational aspects of the economic theory (at the micro and macro-economic level) and of the statistical-econometric methods; understand the aspects related to business, management and company organization; understand the essential elements of data protection legislation and the privacy risks deriving from the release of public and semi-public data.

Knowledge and comprehension skills will be acquired mainly through lectures, accompanied by seminars, exercises and discussion groups, as well as guided and autonomous individual study. The verification of the achievement of learning outcomes takes place through oral and/or written exams, as well as through the evaluation by the teacher of individual and group written reports.

The master's degree course aims to provide the application capabilities useful for recognize, analyze and characterize the problems inherent to the data and their analysis; deal with and solve problems related to the management and storage of data, even from sources that are heterogeneous by type and structure; process data with the use of complex software tools; autonomously define algorithms and programs for data processing; interpret the results of the analysis of economic data with competence and the ability to understand the implications.

The exercises, which integrate all the teachings, will play an important role in achieving and verifying the ability to apply knowledge and understanding. Students are also expected to extend and deepen the knowledge thus acquired through participation in laboratories and workshops, many of which offered by companies and organizations, in seminars conducted by external experts, through the carrying out of the internship or curricular internship, with the consultation of bibliographic materials and with the thesis work.

Making judgements

The graduates should acquire the ability to formulate independent and informed judgments by developing critical skills, with special focus on the effects and effectiveness of the decisions of the companies and institutions in which they operate, also with reference to the ethical implications of such actions and decisions, above all in relation to the security and confidentiality of the analyzed data, the consequences and effectiveness of economic policies. The graduates will also have i) to fully assimilate the principles of professional deontology that guide interpersonal relations in the occupational context, and ii) to acquire the fundamental principles of the scientific approach to the solution of the economic-business problems that they will face in their professional activity. The multidisciplinary approach of the degree program fosters the development of autonomous judgment and critical thinking, by offering students the opportunity to compare methodological approaches belonging to different disciplines. The relevant presence of economic, statistical, and computer science courses, which provide methodological and technical skills of formal analysis, fosters the acquisition of the scientific approach to problem solving. The acquisition of critical skills and autonomy of judgment will be verified in the discussion of project work assigned to students, both individual and team-based, and company seminars through the presentation of business cases. These skills will also be verified by providing open questions in the examinations and, by requiring the students to present/discuss short essays and scientific papers.

Communication skills

The graduates will be able i) to present and effectively communicate the results of their work (e.g., projects, reporting, document analysis) within the company or institutions in which they are involved, ii) to clearly and effectively express and communicate their positions/opinions in written and oral forms by providing evidences supported by data, iii) to set up cooperative and collaborative relationships within working groups, iv) to present proposals and solutions to the problems considered in a working context using mathematical-quantitative tools, v) to access a specialized audience, for example, by publishing the results of a research work. The ability to effectively communicate in working contexts is primarily acquired through the presentation and discussion of business cases. The application of quantitative methods of analysis and computer science techniques in economic teachings will allow to develop the ability of students to use information and empirical evidence to support the solutions they propose in working contexts. The preparation of reports and short essays expected by some teachings, as well as the preparation of the dissertation allow to enhance the written communication skills. The participation to the exercise classes, the development of any internship within a company and, alternatively, the participation to internal laboratories will allow students to develop communication and relational skills. The ability to communicate is assessed in the examination tests as an element that contributes to the overall judgment, especially in those courses where such an ability is explicitly expected in the objectives. The drafting and discussion of the dissertation provide further evaluation elements.

Learning skills

The graduates will have the ability to develop and deepen their skills by exploiting specialized scientific publications, databases, and further useful information on the web; as well as by analyzing information and data through mathematical, statistical, and econometric tools. The DSE course also provides methodological skills that foster the ability i) to undertake a professional experience with managerial functions or high responsibility in industry and in the financial sector where the position of the data scientist is more and more prominent, and ii) to develop the autonomy of research, which is functional to undertake professional activities in research institutions or to continue their studies in second level master's degrees or in doctoral programs.

The students can also attend, as elective educational activities, laboratories for learning methods of economic research. Further learning opportunities are given by teachings that provide methodological and technical skills of formal analysis. Finally, the preparation of the dissertation provides an additional opportunity to develop learning skills through the autonomous elaboration of an advanced research work.

Profilo professionale e sbocchi occupazionali

The MSc program in Data Science for Economics aims to train the following professional figures.

Profile: Data Scientist

Functions: its main functions are i) to analyze and elaborate forecasts on large data flows, ii) to identify and apply the most suitable software tools and statistical techniques for their processing, iii) to create complex models for predictive data-based analysis. The Data Scientist knows the different contexts in which data emerge and she/he knows how to interact with experts from various disciplines.

Skills: statistical analysis, programming, knowledge of software tools.

Outlets: large companies, small and medium-sized enterprises, startups, and Public Administration. They can work in manufacturing, telco and media, services, banking-insurance, utilities sectors.

Profile: Data Analyst

Functions: its main functions are the identification and supervision of operational decision-making processes in direct coordination with the company executive management. They can work in marketing, business, management innovation, and finance.

Skills: baggage of theoretical knowledge about economics, statistics, and computer science to support both organizational

and development decisions of economic institutions and companies.

Outlets: large companies, small and medium-sized enterprises and consulting firms operating in various sectors such as manufacturing, telco and media, services, banking-insurance, utilities.

Profile: Data Driven Economist

Functions: its main functions are to frame problems of economic analysis in the context of data science by identifying data and technologies capable of providing new keys to interpret or to evaluate economic and social phenomena.

Skills: economic theory, statistical, econometric, and computer science techniques.

Outlets: large companies, Public Administration, and international organizations.

Profile: Data-Driven Decision Maker

Functions: the professions included in this category perform managerial functions of high responsibility in private and public companies with an international vocation and a strong technological component, using data analysis to guide strategic and operational decisions.

Skills: wealth of theoretical knowledge about economics, statistics, and computer science to support organizational and development decisions of economic institutions and companies.

Outlets: small and medium enterprises, large companies, Public Administration.

Profile: Analyst of development projects or economic policies

Functions: the professions included in this category contribute to the formulation, monitoring, and analysis of development projects or economic policies.

Skills: baggage of theoretical and operational notions in the field of economics, business management strategy, and the economic policies that govern them.

Outlets: they work in private or public companies in industry, commerce, business services, personal services, and companies

of similar kind as well as international and/or governmental institutions.

Conoscenze per l'accesso

Candidates for admission to the master's degree course may come from various bachelor's, but must have earned at least 30 ECTS in computer science and mathematics (scientific disciplinary sectors: from MAT-01 to MAT-09, INF-01, ING-INF/05) and/or in the area of economic sciences and statistics (scientific disciplinary sectors: SECS-S/01, SECS-S/02, SECS-S/03, SECS-S/06, SECS-P/05, SECS-P/01, SECS-P/02, SECS-P/03, SECS-P/07, SECS-P/08, SECS-P/10).

The ownership of linguistic skills at least at B2 level in the English language is a requirement for access.

Proficiency in English at a B2 level or higher, under the Common European Framework of Reference for Languages (CEFR), is required for admission.

The B2-level requirement will be ascertained by the University Language Centre (SLAM) upon admission as follows:

-Language certificate at or above B2, obtained no more than three years earlier. For the list of language certificates recognized by the University please review: <https://www.unimi.it/en/node/39267/>). The certificate must be uploaded when submitting the online application;

-English level achieved during a Bachelor's degree programme through SLAM courses and tests. The test must have been passed within the last four years. It will be assessed administratively, without the applicant having to attach any certificates;

-Placement Test delivered by the University Language Centre (SLAM), which will take place according to the schedule posted to the website: <https://www.unimi.it/en/node/39267/>

All those who fail to submit a valid certificate or do not meet the required proficiency level will be invited to take the test through the admission procedure.

Candidates who do not sit or pass the placement test will have until 30 June 2022 (Extra EU) or by 31 July 2022 (EU) to obtain and submit a recognized certificate to SLAM.

Students who do not meet the requirement by 30 June 2022 (Extra EU) or by 31 July 2022 (EU) will not be admitted to the Master's degree programme and may not sit further tests

Minimum curricular requirements cannot be considered as a verification of personal competencies and skills, which is mandatory. Admission is conditional and it depends on the assessment of the personal competencies and skills of the student provided by the Admission Board, whose members are appointed by the Faculty Board-Collegio Didattico.

Assessment of personal competencies and skills is based on the academic curriculum (quality of the previous degree as well as the average grade obtained in the bachelor program. Grades obtained in mathematics, statistics, computer science and economics courses are also part of the evaluation) and choice coherence (coherence between the academic curriculum and/or the activities previously carried out by the student and the learning objectives of the MSc in Data Science for Economics).

The Admission Board reserves the possibility to request the applicant an oral interview or written text for admission, held in English language and exclusively done via electronic devices (i.e., via Teams, Skype, Zoom or other platforms). The oral interview is aimed at verifying the individual knowledge and skills required by DSE. A complete, detailed list of topics that can be asked during the interview is published on the DSE website.

Students with a foreign qualification are also required to ascertain the basic requirements equivalent to the minimum requirements for students with an Italian qualification.

Students without an Italian degree or diploma must obtain 3 credits in Additional language skills: Italian by proving an Italian language proficiency at level A2 within the Common European Framework of Reference for Languages (CEFR). This level can be assessed by the end of the degree course in the following ways:

_ by submitting the language certificate achieved no more than three years prior to the submission, at level A2 or higher, recognised by the University (the list of recognised language certificates can be found at: <https://www.unimi.it/en/node/349/>). The language certificate must be uploaded through the service <https://informastudenti.unimi.it/saw/ess?AUTH=SAML>, by choosing the category SLAM;

_ by an entry-level test, organised by SLAM, which can be taken at the beginning of every semester.

Students who fail to reach level A2 will have to attend a 60-hour Italian course organised by SLAM and to pass the final test in order to earn 3 ECTS credits of Additional Language Skills: Italian.

The DSE program also reserves the right to evaluate the possible definition of a planned maximum number of students, determined each year by the competent academic bodies, on the basis of structural, instrumental, and personnel resources available for the functioning of the degree course.

Struttura del corso

The MSc program in Data Science for Economics consists of a defined course of 78 credits, an external 3-credit internship, and a 12-credits final exam. An additional group of 27 credits is chosen by the student according to the courses included in the educational paths identified by the Faculty Board. Of these 27 credits, 9 are a free choice of the student. The educational paths identified by the Faculty Board are i) Data Science, and ii) Economics Data Analysis. The Faculty Board reserves the right to set up new paths in synergy with other departments of the University.

The normal duration of the degree course in Data Science for Economics is two years. To obtain the degree, the acquisition of 120 university ECTS is required, including those reserved for the final exam.

Course Timetable and Exams

Click here for the academic calendar and course timetable: <https://dse.cdl.unimi.it/en/study/course-timetable>

Exam sessions and assessments:

Students will be assessed at the end of each course. There may also be interim written and/or oral assessments during the course.

Exams will be scheduled according to the academic calendar of the Faculty of Political, Economic and Social Sciences.

Check the programme website at <https://dse.cdl.unimi.it/en/study/exams>

Tutoring

Each year a student tutor is selected to monitor and support students with learning difficulties. The degree course also makes use of the tutors present at the DEMM to support foreign students and working students on logistical / organizational problems.

Internship

There are 3 compulsory ECTS for a training internship or external internship

Area didattica

Department of Economics, Management and Quantitative Methods, Via Conservatorio 7, Milano Department of Computer Science "Giovanni degli Antoni", Via Celoria 18, Milano

Prove di lingua / Informatica

Students without an Italian degree or diploma must obtain 3 credits in Additional language skills: Italian by proving an Italian language proficiency at level A2 within the Common European Framework of Reference for Languages (CEFR). This level can be assessed by the end of the degree course in the following ways:

- by submitting the language certificate achieved no more than three years prior to the submission, at level A2 or higher, recognised by the University (the list of recognised language certificates can be found at: <https://www.unimi.it/en/node/349/>). The language certificate must be uploaded through the service <https://informastudenti.unimi.it/saw/ess?AUTH=SAML>, by choosing the category SLAM;
- by an entry-level test, organised by SLAM, which can be taken at the beginning of every semester.

Students who fail to reach level A2 will have to attend a 60-hour Italian course organised by SLAM and to pass the final test during the I semester of the second year of study in order to earn 3 ECTS credits of Additional Language Skills: Italian.

Obbligo di frequenza

No obligation

Formulazione e presentazione piano di studi

Students may choose a complete study plan starting from the first year.

Caratteristiche della prova finale

The final exam consists in a public discussion in front of a committee of a master's dissertation. The master's dissertation is an original piece of work, written by the candidate under the guidance of a supervisor.

Criteri di ammissione alla prova finale

Having earned at least 105 credits for the learning activities expected by her/his study plan and a minimum of 3 credits for

internship, a student can be admitted to undertake the final exam leading to the award of the master's degree. A total of 12 credits are reserved to the design, preparation, and writing up of the master's dissertation. The formal assignment of these credits is possible only when the dissertation is completed and the final exam is passed.

ESPERIENZA DI STUDIO ALL'ESTERO NELL'AMBITO DEL PERCORSO FORMATIVO

The University of Milan supports international mobility by providing its students the opportunity to spend study and internship periods abroad. It is a unique chance to enrich the educational path in a new exciting environment.

The agreements defined by the University with over 300 universities from 30 different countries under the European Erasmus+ programme allow regularly enrolled students to carry out part of their studies at one of the partner universities or to undertake internships at companies, training and research centres and other organizations.

Similar international mobility opportunities are provided outside Europe, through agreements with a number of prestigious institutions.

Cosa offre il corso di studi

One of the most effective policies adopted by European Union in the last years has been the internationalization of higher education. The various Erasmus programmes that have been implemented since the nineties have greatly increased the mobility of European students.

Being a brand-new programme with an internationally oriented educational core strategy, DSE promotes a wide internationalization of their students, and therefore strongly encourages them to spend part of their studies abroad in Erasmus+ Programmes.

Erasmus+ provides opportunities to study, train, gain work experience and skills. Students can go abroad from 3 up to 12 months (including a complementary traineeship period, if planned), and may receive additional grants for studying or training. At the end of their foreign stay, students get full recognition of completed activities in terms of credits for their degree. Student mobility is carried out in the framework of prior "inter-institutional agreements" between the sending and receiving institutions.

Students can also join the traineeship programme (Placement), by going abroad from 2 up to 12 months, starting their traineeship from the first year of study. For a traineeship which is an integral part of the curriculum, the sending institution must give full academic recognition for the period spent abroad. For a traineeship that is not part of the curriculum of the student, the sending institution shall at least provide recognition by recording this period in the Diploma Supplement or, in the case of recent graduates, by providing a traineeship certificate. Traineeship may also be established with private and public companies, educational or research centers other than the hosting institution, especially in the field of finance.

Modalità di partecipazione ai programmi di mobilità - mobilità Erasmus

The students of the University of Milan can participate in mobility programmes, through a public selection procedure.

Ad hoc commissions will evaluate:

- Academic career
- the candidate's proposed study programme abroad
- his/her foreign language proficiency
- the reasons behind his/her application

Call for applications and informative meetings

The public selection for Erasmus+ mobility for study generally begins around February each year with the publication of a call for applications specifying destinations and requirements. Regarding the Erasmus+ Mobility for Traineeship, the University of Milan usually publishes two calls a year enabling students to choose a destination defined by an inter-institutional agreement or to find a traineeship position on their own.

The University organizes informative meetings to illustrate mobility opportunities and rules for participation.

Erasmus+ scholarship

The European Union grants the winners of the Erasmus+ programme selection a scholarship to contribute to their mobility costs, which may be supplemented by the University funding for disadvantaged students.

Language courses

Students who pass the selections for mobility programmes can benefit from intensive foreign language courses offered each year by the University Language Centre (SLAM).

MODALITA' DI ACCESSO: 1° ANNO LIBERO CON VALUTAZIONE DEI REQUISITI DI ACCESSO

Informazioni e modalità organizzative per immatricolazione

All applicants (both foreign and Italian holding a bachelor's degree or expecting to obtain it by December 31st, 2022), with the exception of non-EU students not resident in Italy, must apply for admission to the DSE programme from March 15st, 2022, till June 30th, 2022.

Non-EU applicants not resident in Italy (holding a bachelor's degree or expecting to obtain it by December 31st, 2022), must apply for admission to the DSE programme from March 15st, 2022, till May 31st, 2022.

Non-EU applicants not resident in Italy are also required to submit a pre-application at the Italian Embassy of their own country before May 31st, 2022 (this date may be subject to change according to Italian Ministry of Foreign Affairs).

Applicants will be selected based on academic curricula, choice coherence, and technical interview (when required), with the aim to ascertain the applicants' personal knowledge, competences, and skills in the core areas of the DSE programme. When required, the interviews of applicants will be held via electronic devices (i.e., via Teams, Skype, Zoom or other platforms) according to a calendar individually agreed with each applicant, in June and in July 2022.

Further detailed information concerning the DSE programme and the admission procedures are available at <https://dse.cdl.unimi.it/en>, or can be asked directly to the programme Secretariat: dse@unimi.it.
