### **CARATTERISTICHE DEL CORSO DI STUDI**

**Obiettivi formativi generali e specifici**

The Master's program in Medical Biotechnology and Molecular Medicine aims to train professionals with a solid technical and theoretical background. Their expected career development will be to develop scientific methodologies and coordinate research projects in the fields of applied biotechnology and translational medicine. The Master's program will provide students with a solid background in the genetic and molecular bases of diseases and the physiopathological mechanisms occurring in human beings in disease states, in order to develop biotechnology-based diagnostic and therapeutic strategies. This knowledge will be complemented with specific training in the fields of computer science, biophysics, nanotechnology and pharmacology. The Master's program is organised in common and curricular learning activities focusing on neuroscience, oncology, molecular diagnostics, immunobiotechnology, modelling and bioinformatics. As part of the common course, students will learn the economic management of a scientific project, with a focus on the construction of a business plan and cost analysis. The Master's program devotes a long period of time, almost the entire second year, to laboratory activities in which the student, under the supervision of a tutor, will independently develop and apply different experimental approaches in the context of a larger research project. This activity will be aimed at preparing for the final examination of the degree course.

## **Risultati di apprendimento attesi**

The Medical Biotechnology and Molecular Medicine graduate will be able, in her/his future career, to coordinate and run research projects in the field of biotechnology and molecular medicine and to collaborate with physicians in the development of novel and innovative diagnostic and therapeutic strategies.

## **Profilo professionale e sbocchi occupazionali**

The objective of the course is to provide the scientific community with experts in the fields of medical biotechnology and molecular medicine able to develop new experimental models for the study of human diseases, to develop new diagnostic approaches, to identify new therapeutic molecules, to devise innovative drug delivery systems. All these possibilities arise from the competences of the Master's graduate who will have a strong translational educational background that will allow her/him to represent a fruitful interface with the clinics, building a bridge between the bench and the bedside. A deep knowledge of the pathogenetic mechanisms of diseases is required in order to apply basic disciplines to the management of medical problems.

Employment opportunities: public and private research structures, including Universities, CNR (National Research Council), Istituto Superiore di Sanità (National Institute for health); hospitals; private pharmaceutical, diagnostic and biotechnological companies; companies supporting scientific research (instruments, biotechnological reagents); companies involved in science communication and publishing.

Below a list of professional profiles:

Medical Science Liaison (MSL) within pharmaceutical and biotechnological companies

In the pharmaceutical and biotechnological companies, this new professional figure has the role of establishing scientific relationships with clinicians, supporting the appropriate use of the drugs of interest for the company. This professional has a strong medical and pharmacological background that enable her/him to talk with physicians in order to solve clinical problems related to the use of specific drugs.

Clinical Monitor within pharmaceutical and biotechnological companies; CRO (Clinical Research Organization) (upon completion of a specific training course)

Thanks to the strong background in pharmacology and statistics this expert will be able to coordinate clinical studies. Market Access Manager within pharmaceutical and biotechnological companies; consulting agencies, AIFA (Italian agency for drugs) (upon completion of a specific training course)

Thanks to the strong background in economy and pharmacology, and a knowledge of ethical issues related to commercialization of drugs, the graduate will be in the ideal position to establish stable relationships with the Regulatory Authorities and, in general, with the Institutions with the aim of promoting the approval and the access to the market of new pharmacological and biotechnological products.

Medical and scientific communication advisor within scientific and medical communication agencies and publishers Thanks to the multidisciplinary approaches to medical sciences acquired during the course, the Master Program graduate may evolve into a medical writer or a consultant for the development of distance learning modules for the Continuing Medical Education (CME) or other health professionals requiring continuing education or again as an advisor for pharmaceutical and biotechnological companies in the communication with patient organizations.

Research scientist, after having been enrolled in PhD programs, second level Master degrees, Specialization School in Medical Genetics, Medical Pharmacology, Clinical Biochemistry, Microbiology and Virology, Nutrition. After the State Board Examination, the graduates can enter into the Professional Register of Biologists (Senior Section).

## **Conoscenze per l'accesso**

Enrollment to this Master Course is restricted to a limited number of students, in fact access to the program is capped locally. Italian and European students admitted to the Master Program are identified by a ranking list based on the scores of the admission test. This ranking list will be also used for the choice of the curriculum. To be eligible for enrolment and included in the ranking list, a minimum score of 20/50 obtained in the admission test is required. See below for extra European students\* The date of the entrance test will be communicated later in the announcement of selection published on the website of UNIMI.

For Italian, European candidates the selection will be on the basis of a competitive written entrance exam. The admission test consists of a written test based on multiple-choice questions, it will be in English and will include 50 questions on topics such as biology, biochemistry, physics, pharmacology, immunology, pathology, genetics.

For non-EU students resident abroad (applicants for a student visa), selection and ranking will be based on the assessment of the personal and scholastic curriculum and on an interview evaluation.

B2 entrance level:

Proficiency in English at a B2 level or higher per the Common European Framework of Reference for Languages (CEFR) is required for admission.

The B2-level requirement will be ascertained by the University Language Centre (SLAM) upon admission as follows:

- Language certificate of B2 or higher level issued no more than three years before the date of admission application. You will find the list of language certificates recognized by the University at: <https://www.unimi.it/en/node/39322>. The

certificate must be uploaded when submitting the online application;

- English level achieved during a University of Milan degree programme and certified by the University Language Centre (SLAM) no more than four years before the date of admission application, including levels based on language certificates submitted by the applicant during their Bachelor's degree at the University of Milan. In this case the process is automatic, the applicant does not have to attach any certificates to the application;

- Entry test administered by the University Language Centre (SLAM) according to the calendar published on the website: (<https://www.unimi.it/en/node/39267/>)

All those who fail to submit a valid certificate or do not meet the required proficiency level will be instructed during the admission procedure to take the Entry test.

Applicants who do not take or pass the Entry test will be required to obtain a language proficiency certificate recognized by the University (see <https://www.unimi.it/en/node/39322/>) and deliver it to the SLAM via the InformaStudenti service by the deadline fixed for the master's programme (<https://www.unimi.it/en/node/39267/>).

Applicants who do not meet the requirement by said deadline will not be admitted to the master's degree programme and may not sit any further tests.

### **Struttura del corso**

The planned duration of the Master's program in Medical Biotechnology and Molecular Medicine is two years, divided into 6 terms, during which the student will acquire a total of 120 ects. The first and second quarters of the first year comprise learning activities common to all students, with the aim of providing them with a solid and in-depth knowledge of the different areas of interest in medical biotechnology. The third trimester of the same year is organised into five curricular learning activities: neuroscience, medical and experimental oncology, diagnostics for personalised medicine, experimental immunology and transplantation, generation and characterisation of new experimental models, advanced computational methods. These curricular activities are intended to supplement the more general educational background of our graduates with more specific translational and clinical information. At the beginning of the Master's program, each student will choose one of five curricula. In the fourth trimester (second year), part of the activities will be devoted to the socio-economic aspects of biotechnology, with a focus on bioethics. The remainder of the fourth trimester and the entire fifth and sixth trimester will be devoted to research activities in selected laboratories (internships, see below). Over the course of the two years, students will have the opportunity to acquire 8 lectures as electives, chosen from the various offerings of the Course itself or from other Courses at our institution, provided that their topic is congruent with the Master's objectives.

### **Obiezione di coscienza**

In compliance with Act No. 413 of October 12, 1993 "Regulations on conscientious objection to animal experimentation", the Faculty of Medicine recognizes the undisputed right to conscientious objection by students.

Students may be exonerated from the attendance at laboratory exercises in which testing is scheduled on live or dead animals. The achievement of the scientific and practical knowledge for passing the exams will be granted, in accordance with the educational objectives of the specific degree programs, through substitutive methods suggested by the teachers.

### **Area didattica**

The common learning activities will be held at the Dipartimento di Biotecnologie Mediche e Medicina Traslazionale - Via Fratelli Cervi, 93 - 20054 Segrate.

Curricular learning activities will be held at Dipartimento di Biotecnologie Mediche e Medicina Traslazionale - Via Vanvitelli, 32 10129 Milano e Via F.lli Cervi, 93 - 20054 Segrate.

### **Articolazione degli insegnamenti**

Lectures and seminars

Lecture is the explanation by the teacher of the course about subjects regarded as fundamental for the acquisition of the basic knowledge in a given discipline. Seminars are similar to lectures, but they are held by specialists in order to provide a deeper knowledge in certain fields, the subjects illustrated during seminars are part of the program of the course and are part of the final test.

Laboratory activities

During laboratory activities the student, under the supervision of a tutor, will autonomously develop different experimental approaches in the context of a wider research project. This activity will be finalized to the preparation of the degree program final exam.

Professionalizing activities

Professionalizing activities are part of the laboratory activities. Elective training chosen by the students

The course provides for a training work chosen by the student, distributed throughout the entire course of study. These selected activities offer the student the opportunity to analyse specific or innovative subjects, choosing from a range of suggestions offered each year by the Faculty. Selected activities may be of different types and attendance is compulsory. The three types of selected activity are configured as:

1. seminar type courses;
2. internships;
3. participation in conferences and congresses.

Similarly, a fourth type of selected activity can be configured:

4. "summer internships", whose regulation is covered by Art. 8 of the Faculty Regulations on Selected Activities.

The student will mature 1 credit for every three conferences/congresses attended during the chosen course of study for Type

3 activities (attendance at conferences and congresses). The student can acquire a maximum of 1 credit for attending Type 3 activities (attendance at conferences and congresses) during the period of the chosen studies.

At the end of the attendance of the Selected Activity (elective) students who have at least 75% of attendance will receive a certificate and the credits.

The specific regulation of selected activities can be found in the Faculty Regulations on Selected Activities.

### **Tutorato**

The Master Program offers a tutorship service to help students in their progression through the course with specific reference to internship selection and dissertation preparation as well as international mobility (see tutor list above).

### **Prove di lingua / Informatica**

Among the electives, those who do not hold an Italian high school diploma or degree can obtain 3 credits in Additional language skills: Italian by demonstrating A2 level in Italian per the Common European Framework of Reference for Languages (CEFR). This level can be assessed in one of the following ways:

- by submitting a certificate of A2 or higher level issued no more than three years prior to the date of submission. You will find the list of language certificates recognized by the University at: <https://www.unimi.it/en/node/349/> ). The language certificate must be uploaded through the dedicated platform;

- by an entry-level test administrated by SLAM that can be taken only once and is compulsory for all students who do not have a valid language certificate. Those who fail to reach A2 level will have to attend one or more than one 60-hour Italian course(s) geared to their level. Those who do not take the entry-level test or fail to pass the end-of-course test after six attempts will have to obtain language certification privately in order to earn the 3 credits of Additional language skills: Italian. As an alternative, they can modify their course programme by choosing a different elective.

### **Obbligo di frequenza**

The student is required to attend all the teaching activities, with a tolerance of no more than 25% of the hours.

Students are required to sign their attendance at each learning activities. Should the number of absences be higher than 25%, the Teaching Committee will take the necessary measures.

### **Modalità di valutazione del profitto**

Each course has a single exam, which is always individual (art. 22, punto 1, del Regolamento Didattico d'Ateneo), and the score will be expressed in thirtieths (art. 11, comma 7, lettera e) del citato DM 270/2004 e dell'art. 22, punto 7 del Regolamento Didattico di Ateneo). Details for exam procedures can be found here: <https://medicalbiotechnology.cdl.unimi.it/en/study/exams>.

### **Caratteristiche Tirocinio**

During the internship, the students will be directly in charge for the development of a defined research project, with the aim of generating experimental data that will be used for the preparation of the degree program final exam. The laboratory activities are related to the subjects and topic dealt during the course, they are compulsory and they will be certified by the tutor and by a committee.

### **Caratteristiche della prova finale**

The final exam consists of: written text, oral presentation and defence of an experimental thesis containing the data obtained by the student during her/his attendance to the research lab. The thesis will be elaborated under the supervision of a professor belonging to the Master Program in Medical Biotechnology and Molecular Medicine with the collaboration of a tutor. The committee will take in consideration the quality of the thesis, the quality of the public presentation and the scientific maturity of the candidate during the discussion.

### **Orario lezioni**

<https://medicalbiotechnology.cdl.unimi.it/en/study/course-timetable>

## **ACCESSO AI CORSI DI LAUREA MAGISTRALI**

### **2 Accesso da altri corsi di laurea**

To be admitted to the entrance test, candidates from Italian and EU universities have to possess 180 ects obtained in the Bachelor's degree. Specifically, 50 ects have to derive from the following areas: BIO/09 (Physiology), BIO/10 (Biochemistry), BIO/11 (Molecular biology), BIO/12 (Clinical biochemistry), BIO/13 (Biology), BIO/14 (Pharmacology), BIO/16 (Human anatomy), BIO/18 (Genetics), BIO/19 (General microbiology), MED/01 (Medical statistics), MED/03 (Human genetics), MED/04 (General pathology and immunology), MED/05 (Clinical pathology), MED/06 (Medical oncology), MED/07 (Microbiology), MED/08 (Pathology), MED/09 (Internal medicine), MED/25 (Mental health), MED/26 (Neurology), MED/46 (Laboratory medicine), INF/01 (Informatics), FIS/07 (Medical physics).

For non-EU students resident abroad (applicants for a student visa) the admission to the Master Program will be based on the assessment of the personal and scholastic curriculum and on an interview evaluation. As for Italian and EU students, extra-EU applicant' scholastic curriculum has to include at least 50 ects in the scientific fields reported in the list as above. In order to profitably follow the learning activities, the candidate should have a good knowledge of spoken and written English. The B2 level is required and the certification has to be provided at the registration of the admission test.

Students waiting to obtain the Bachelor's Degree, can participate in the admission test "sub iudice". In case of success, they

will be accepted only if they will obtain the Bachelor degree by December 31th, also possessing the prerequisite described above.

More details about the selection/admission procedure can be found below in the Admission Criteria paragraph.

## **ESPERIENZA DI STUDIO ALL'ESTERO NELL'AMBITO DEL PERCORSO FORMATIVO**

The University of Milan supports international mobility by providing its students with the opportunity to spend study and internship periods abroad. It is a unique chance to enrich your educational path in a new exciting environment.

The agreements between University of Milan with over 300 universities from the 27 EU member countries under the European Erasmus+ program allow regularly enrolled students to carry out part of their studies at one of the partner universities or to undertake internships at companies, training and research centres and other organizations.

Similar international mobility opportunities are provided outside Europe, through agreements with a number of prestigious institutions.

### **Cosa offre il corso di studi**

The Master program in Medical Biotechnology and Molecular Medicine supports international mobility with leading international universities, as well as the possibility for students to earn credits through exchange education and training programs with Partner organizations.

Available programs:

-Bilateral agreements in the framework of the Erasmus + program with: University of Leuven (Katholieke Universiteit Leuven, Belgium), Leids Universitair Medisch Centrum (LUMC) of the University of Leiden (Netherlands) and University of Cantabria (Universidad de Cantabria, Spain).

-Traineeship with: Institute for Research in Biomedicine (IRB – Bellinzona, Switzerland).

In recent years, a growing number of students have developed their professionalism and the European dimension of their training through residence periods abroad. Associated universities represent highly recognized European institutions, featuring reference schools (Master and PhD schools) in biomedical sciences and offer the possibility of carrying out research activities in a wide range of scientific fields covered by the Degree Program. The students will thus be offered exciting opportunities to enhance their CVs and evaluate their interests in extending their careers in the international setting. The Master course in Medical Biotechnology and Molecular Medicine offers second year students the possibility to carry out the entire practical training for the preparation of their final thesis work in one of the aforementioned institutions or with other institutions with which an agreement has been established. The student will have to define a research project related to his/her course of studies and curricular training, with the joint agreement of both the Unimi and the foreign tutors. The period abroad amounts to 9 months equivalent to 32 credits. A positive evaluation of the period abroad is required. The latter should be defined by the tutor in the foreign university, the Unimi tutor and is subjected to the approval by the Unimi Didactic Council. Erasmus students who obtain outstanding results, proved by an official evaluation letter of the foreign tutor to the President of the Masters Commission, will be rewarded with 1-2 additional points in the final Laurea Grade. Besides general informative meetings organized by the University, the Degree course in Medical Biotechnology provides specific support to interested/selected students through the organization of specific informative sessions and/or meetings with the tutor for mobility.

### **Modalità di partecipazione ai programmi di mobilità - mobilità Erasmus**

The students of the University of Milan can participate in mobility programs, through a public selection procedure.

Ad hoc commissions will evaluate:

- Academic career
- the candidate's proposed study program abroad
- his/her foreign language proficiency
- the reasons behind his/her application

Call for applications and informative meetings

The public selection for Erasmus+ mobility for study generally begins around February each year with the publication of a call for applications specifying destinations and requirements. Regarding the Erasmus+ Mobility for Traineeship, the University of Milan usually publishes two calls a year enabling students to choose a destination defined by an inter-institutional agreement or to find a traineeship position on their own.

The University organizes informative meetings to illustrate mobility opportunities and rules for participation. Erasmus+ scholarship

The European Union grants the winners of the Erasmus+ program selection a scholarship to contribute to their mobility costs, which may be supplemented by the University funding for disadvantaged students.

Language courses

Students who pass the selections for mobility programs can benefit from intensive foreign language courses offered each year by the University Language Centre (SLAM).

**PROPEDEUTICITA'**

Before taking any curricular exams, the student must pass the six common exams of the courses, provided in the first two quarters. In order to begin the laboratory activity, the student has to pass the 6 common exams of the first two trimesters.
