GENERALITA’
Classie di laurea di appartenenza: LM-71 SCIENZE E TECNOLOGIE DELLA CHIMICA INDUSTRIALE
Titolo rilasciato: Dottore Magistrale
Durata del corso di studi: 2 anni
Crediti richiesti per l’accesso: 180
Cfu da acquisire totali: 120
Annualità attivate: 1°, 2°
Modalità accesso: Libero con valutazione dei requisiti di accesso
Codice corso di studi: F7Y

CARATTERISTICHE DEL CORSO DI STUDI
Premessa
The Master’s Degree Course in Industrial Chemistry aims at preparing chemists with a good knowledge of theory and practical aspects of the industrial production in different areas of chemistry, specifically concerning the product-process relationship, as well as of economics and management, and learn to work independently and to take full responsibility of projects and structures. The Master’s Degree program in Industrial Chemistry, entirely taught in English, is designed to train high-quality human capital, capable to take on the challenges of the global economy, favoring access of graduates in Industrial Chemistry to the world labor market. The key role given to English in this learning program is justified by the fact that English has long since represented a global communication tool in economy and society, which will contribute to the achievement of the prefixed quality objectives.

EUROMASTER®. The Master’s Degree Course in Industrial Chemistry (up to 2013/14, Chimica Industriale e Gestionale) of the Università degli Studi di Milano has been among the first ones in Italy to gain the EuroMaster Label. The EuroMaster Label is assigned by a special jury purposely appointed by the European Thematic Association, gathering European universities and chemical societies. The EuroMaster Label certifies the educational qualification provided by the Master’s Degree Course in Industrial Chemistry as a master’s degree recognized by the European Universities and gives the right to access the post-graduate courses of chemistry at the European level.

Obiettivi formativi generali e specifici
The Master’s Degree program in Industrial Chemistry complies with the European standards of reference for Sciences and Technologies of Industrial Chemistry and provides technical skills in the disciplines of chemistry and industrial chemistry and in their applications.

The educational program of the master’s degree course is designed to provide:
- skill related to self-directed and independent work, enabling to hold positions of full responsibility in the implementation of industrial and research
projects and structures;
- knowledge and understanding to undertake professional careers in the area of industrial chemistry, by independently managing diversified activities, such as the characterization of new products and materials, the experimentation of new technologies, and the activities related to the development and pilot phase in view of the industrial production;
- the ability to interact during the decision-making process with different corporate functions (engineering, marketing etc.) involved in the process of research, development and marketing of active principles, especially those characterized by high added value;
- the competencies required to work in the creative process and in the managerial and operational phases of research in chemistry and industrial chemistry either in public or private laboratories (either European or extra-European), research centers, research and development organizations; to participate in the theoretical and practical development of new chemical technologies and to meet requirements of research and development, quality control within specific legal frameworks or production processes in industries and public institutions;
- written and oral communication skills, in English to enable students to communicate independently and fluently with foreign partners.

**Abilità e competenze acquisite**
Graduates in Industrial Chemistry have the skills and knowledge to undertake highly qualified professional activities in business management and in the operation of research laboratories in the field of chemistry, industrial and pharmaceutical chemistry and possess the knowledge to develop industrial chemical processes from the laboratory scale to the plant pilot.

Their competences in corporate management are characterized by high knowledge of science and technologies of chemistry and industrial chemistry. They are capable to organize the research work, to define the development lines and their plans, to ensure integration of the different research sectors, to guarantee the scientific upgrade as well as to verify the results obtained and to promote their development and application and will have the ability to adapt to the continuous evolution of the chemical and disciplines and to interact with professional having similar background.

**Profilo professionale e sbocchi occupazionali**
Graduates in Industrial Chemistry will be able to carry out, among others, the following activities: promotion and development of the scientific and technological innovation; planning and management of industrial technologies; holding functions of high responsibility in the industrial, environmental, health care, and public service sectors.

Graduates in Industrial Chemistry are expected to find employment in: research and development in chemical industries; design and management of pilot plants, chemical plants; industries and research centers working in diversified sectors of either conventional or innovative fields.

The acquired competences allow graduates to have open access to several industrial sectors such as those of polymeric materials, food industry, agrochemicals, additives, auxiliaries, materials for electronics, ecology, intellectual property (patents) and business management.

The Master’s Degree in Industrial Chemistry constitutes a preferential title to access the PhD programme in the area of industrial chemistry.

For the graduate of this class, enrollment in the National Order of Chemists is possible, after passing the State Exam.

**Articolazione degli insegnamenti**
The master degree in Industrial Chemistry is structured in Semesters. The subdivision of the courses into 1st- and 2nd-year semesters is:

1st YEAR
1st Semester
Advanced industrial chemistry with Laboratory (9 CFU), Economics and management (6 CFU), Chemical processes and industrial plants (6 CFU), 1 course from Related and Integrative

2nd Semester
Students must earn 9 CFU by selecting 1 course from those included in Table 1, and 24 CFU by selecting 3 courses of 6 CFU taken from Table 2 and 1 course from Related and Integrative

2ND YEAR
1st Semester
Students must earn 18 CFU by selecting 1 course of 6 CFU from Table 2, and 2 freely selectable courses (included those held in Italian) of 6 CFU. and start the Thesis laboratory

2st Semester

Thesis Laboratory, preparation of the dissertation and final defense of the Thesis

Students must also earn 3 CFU of English Proficiency during the course of their studies

Prove di lingua / Informatica

Students are requested to earn 3 credits of English proficiency before they enter the laboratory thesis. However, it is strongly recommended to acquire these credits in the 1st year of their studies.

This can be done in the following ways:
- by acquiring the B2 level in the test provided by the University and organized by the University Language Service (SLAM) in the period from January to February.
- by presenting an internationally recognized certificate of B2 level, as defined by C.E.F. (Common European Framework), or equivalent (list available on the website of the SLAM http://www.unimi.it/studenti/100312.htm and the Didactic Board http://www.ccdichim.unimi.it).

Students who do not reach the B2 level (or higher) at the test, will have to follow a course organized by SLAM in the first semester of the second year.

At the end of the course there will be an evaluation test to which will be admitted only to students with 70% attendance. In case of a negative result, the final test can be supported again in the subsequent sessions of the same year.

Students from a Bachelor’s degree of the Faculty of Science and Technology who have supported the Oxford placement test for not more than three years, obtaining the B2 level (or higher) are exempt from the knowledge of the English language.

Obbligo di frequenza

It is mandatory to attend the Laboratory courses/modules. In all the other cases the attendance is strongly suggested

Modalità di valutazione del profitto

ASSESSMENT PROCEDURE OF THE LEARNING OUTCOMES

The schedule of the examination sessions for the assessment of the learning outcomes is available through the Sifaonline Service. For each course at least one session is scheduled for each of the following months: February, June; July, September, and January Extra sessions might be scheduled in November and at the end of the Easter holidays.

TEACHING AGENDA

Lessons take place as follows:
- 1st Semester: October 1st, 2019 – January 17th 2020
- 2nd Semester: March 2nd 2020 – June 12th 2021

FIXED DATES

- Students have to choose a complete study plan, to be submitted to the Student Bureau (according to the appropriate procedures) accordingly to scheduled dates: http://www.unimi.it/studenti/1162.htm

SESSIONS OF THE FINAL EXAM

- July 2020
- October 2020
- December 2020
- February-March 2021

Regole generali per iscrizione e ammissione agli appelli d’esame

EXAM ENROLMENT

To sit for an examination, the student must enroll for the relevant session, through the SIFA online services: SIFA – Servizi didattici – iscrizione agli esami (http://www.unimi.it/studenti/servizi_online.htm).

Before (or contextually with) the enrolment the student must fill the online questionnaire for the evaluation of the relevant course.

Contextually with the exam enrolment, the student career is checked via the information system. It is strongly suggested to check the effective enrolment for the selected exam by selecting “Informazioni – Visualizza gli appelli a cui sei iscritto” in the left column of the SIFA page for exam enrolling: http://www.unimi.it/htpsifa/ENG/nonProfiledPage_100.html

TEACHING EVALUATION

The online evaluation of a single course is mandatory and enables the enrolment for the said course. Students are strongly suggested to fill the questionnaire before the completion of the teaching activities of each course, even if they do not intend to take soon the exam. The evaluation questionnaire remains anonymous.

Remember that the deadline for enrolments is usually 5 days before the session.

EXAM RECORDING

Exams and tests are recorded electronically. Only the students correctly enrolled via the SIFA online services can be allowed to take any exam.

SPECIAL INSTRUCTIONS

- To take any exam or test, the student must have fulfilled the payment of taxes and contributions, must have passed possible propaedeutic exams, must have all the attendance certificates, where requested.
- It is forbidden to retake an already passed exam, even in the case of educational activities recorded in a previous career. The violation of the above rules implies the annulment of the exams by Rectoral act.

It is mandatory that, before any exam or test, the board of examiners verifies the personal identity of the candidate, who must exhibits valid identification document. No student can be allowed to take any exam or test in the absence of an identification document.

Regole generali per iscrizione alle attività formative e/o laboratori

Students must enrol to Laboratories via internet at the SIFA online services (http://www.unimi.it/studenti/servizi_online.htm).

Formulazione e presentazione piano di studi

CHOICE AND SUBMISSION OF THE STUDY PLAN

To favor the planning of the educational activities, Students are asked to fill a preliminary study plan to be presented to the Office for Secretary's office of the Study Programme, Department of Chemistry, before October 14th, 2019. Students will receive the necessary form at their admission interview.

ESPERIENZA DI STUDIO ALL’ESTERO NELL’AMBITO DEL PERCORSO FORMATIVO

The University of Milan supports the international mobility of its students, offering them the opportunity to spend periods of study and training abroad, a unique opportunity to enrich their curriculum in an international context.
Students enrolled in the Industrial Chemistry course are encouraged to apply to the Erasmus Plus actions, where various positions are available in 20 European universities in Spain, France, United Kingdom and North Europe (more information at http://www.unimi.it/studenti/erasmus/79224.htm#par79238). They can earn their credits by following courses and/or by performing part of their experimental thesis abroad. Before leaving, students must submit a Learning Agreement to be approved by the Teaching Board: this approval is mandatory for the acquisitions of the credits.

**Modalità di partecipazione ai programmi di mobilità - mobilità Erasmus**

To gain access to mobility programs for study purposes, lasting 5-10 months, the enrolled students of the University of Milan must attend a public selection that starts usually around the month of February each year through the presentation of specific competition announcements, which contain information on available destinations, respective duration of the mobility, requirements and deadlines for submitting the online application.

The selection, aimed at evaluating the proposed study abroad program of the candidate, knowledge of a foreign language, especially when this is a preferential requirement, and the motivations behind the request, is performed by specially constituted commissions.

Each year, before the expiry of the competition announcements, the University organises information sessions for the specific study course or groups of study courses, in order to illustrate to students the opportunities and participation rules.

To finance stays abroad under the Erasmus + program, the European Union assigns to the selected students a scholarship that - while not covering the full cost of living abroad - is a useful contribution for additional costs as travel costs or greater cost of living in the country of destination.

The monthly amount of the communitarian scholarship is established annually at national level; additional contributions may be provided to students with disabilities.

In order to enable students in economic disadvantaged conditions to participate in Erasmus+ program, the University of Milan assigns further additional contributions; amount of this contributions and criteria for assigning them are established from year to year.

The University of Milan promotes the linguistic preparation of students selected for mobility programs, organising every year intensive courses in the following languages: English, French, German and Spanish.

The University in order to facilitate the organisation of the stay abroad and to guide students in choosing their destination offers a specific support service.

Desk opening hour: Monday-friday 9 - 12

**MODALITA' DI ACCESSO: 1° ANNO LIBERO CON VALUTAZIONE DEI REQUISITI DI ACCESSO**

**Istruzioni operative**

**INFORMATION AND METHOD FOR ADMISSION TO OPEN ACCESS MASTER DEGREE IN INDUSTRIAL CHEMISTRY FOR ITALIAN AND FOREIGN STUDENTS**

The Italian and foreign students with academic qualification awarded in Italy must submit applications for admission respecting the deadlines indicated in the "student area" of the Unimi web portal. Undergraduates who intend to graduate by December 31st, 2019 are also allowed to apply.

The presentation of the application form is compulsory and must be submitted electronically to the following address: http://www.unimi.it/studenti/servizi_online.htm

Admission requires possession of minimum curriculum requirements and suitable personal skills (DM 270/04)

**CURRICULAR REQUIREMENTS**

The earned credits will be fully recognized to graduates of the undergraduate program of class L-27 of the University of Milan All other students must demonstrate to have the curricular requirements of the graduates of the class L-27. In particular, they are required to have earned:

- At least 20 credits in mathematics and computer and physical sciences
- At least 70 credits in the core areas of the class: CHIM/01-06, CHIM/12, ING-IND/21-22, ING-IND/25 and BIO/10-12

The minimum requirement for the English language knowledge is the B1 level ("lower intermediate") of the Common European Framework.

**CHECK OF PERSONAL SKILLS**

The personal skills of each candidate will be ascertained through an interview on topics related to the subjects covered in the fundamental courses of the bachelor's degree in Industrial Chemistry. The interview may also be carried out before graduation (which, for the purpose of registration, has to be achieved by December 31st, 2019), subject to the curricular requirements.

The interview will be conducted by the Commission for Access. The failure of the interview prevents the access to the MSc in Industrial Chemistry for the current year.

The personal skill will be verified by the following methods:

a) the European Chemistry Tests granted by the European Chemistry Thematic Network (http://ectn.eu/committees/virtual-education-community/echemtest/) for the accrual of expertise in Chemistry. The test includes questions, in English, with multiple answers, on topics of the five areas of Analytical, Inorganic, Organic, Industrial and Physical Chemistry. In order to pass the test, students must answer correctly to at least 16% of the questions in each of the five thematic areas. The time allowed to perform the test is 4 hours.

To perform the test, the Candidate will be asked to show a valid identification document.
b) After passing the test, an interview with the Access Commission will take place on topics related to fundamental aspects of core disciplines of the degree in Industrial Chemistry and to ascertain the knowledge of the English language. The test to verify the personal and language skills is selective even in the case the curricular requirements listed above are recognized; the negative outcome prevents the access for the current year.

ALL CANDIDATES, INCLUDING THOSE EXPECTING to graduate before, December 31st, 2019, ARE STRONGLY SUGGESTED TO APPLY FOR INTERVIEW in September.

For admission in 2019/20 the EchemTest and the interviews to ascertain the curricular requirements and the adequacy of personal skills of candidates will take place on the following dates:

- September 25th, 2019, at 8:30 a.m., at the Sector Academic Via Celoria 20, Milan. The next day at 1:30 p.m. there will be the interview to verify the possession of the curricular requirements and the adequacy of the personal preparation of the candidates that performed the EChemTest.

- December 18th, 2019, at 8.30 a.m., at the office professor Michele Ceotto, Department of Chemistry, Via Golgi, 19 - Milan. The interview to verify the personal preparation of candidates will follow.

N° posti riservati a studenti extracomunitari non soggiornanti in Italia
20

Note
*************** IT IS ADVISABLE TO CHECK FOR ANY POSSIBLE UPDATES ABOUT DATES ON THE ECHEMTES AND THE INTERVIEWS (http://www.ccdchim.unimi.it) ***************

ENROLLMENT IN INDUSTRIAL CHEMISTRY MASTER

Only graduates who have successfully passed the verification test can be enrolled in Industrial Chemistry. The registration will take place after 5 working days and under the terms and conditions indicated in the "students" section of the Unimi web site.

Students of the University of Milan who have applied for admission and who have acquired credits in excess of the 180 required during the bachelor’s degree, taking courses and/or laboratories provided for in the master’s degree program and passing the related exams, may request the recognition for the achievement of the 120 CFU required.
